

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Comparison of the effect of dynamic neuromuscular stabilization and Barreausol exercises on the pain, functional disability, muscle endurance and mobility of athletes female with nonspecific chronic low back pain

Protocol summary

Study aim

Comparison of the effect of dynamic neuromuscular stabilization and barreausol exercises on pain, functional disability, muscle endurance, and mobility of athletes female with nonspecific chronic low back pain.

Design

A randomized controlled trial with a double-blind, randomized parallel group

Settings and conduct

The tests of the current research will be taken at the laboratory of Shahid Beheshti University, and after all the tests, selected exercises will be presented at the club of Shahid Beheshti University. A double-blind study, the participants, the data analyst and the research statistician will not have any information about the research groups.

Participants/Inclusion and exclusion criteria

Female gender, age range 20 to 40 years, having chronic back pain during the last six months, being an athlete
Exit criteria: Willingness to withdraw at any time from the implementation of the training program or before and after the test, Absence of more than two continuous sessions or more than three non-continuous sessions during the implementation of the training programs, Injury during the implementation of the research period.

Intervention groups

After completing the pre-tests, the subjects were placed in the first experimental group: dynamic neuromuscular exercises, in the second experimental group: barreausol exercises, and in the third group: the control group where no specific activity is performed, and after completing the treatment protocols of each Three groups are taken after the test.

Main outcome variables

Improvement of pain, functional disability, muscle endurance, and mobility.

Scientific title

Comparison of the effect of dynamic neuromuscular stabilization and Barreausol exercises on the pain, functional disability, muscle endurance and mobility of athletes female with nonspecific chronic low back pain

Public title

The effect of two different exercise programs on the improvement of back pain in female athletes

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Female gender Age range from 20 to 40 years Having chronic back pain during the last six months Not having heavy sports training during the research Being an athlete Not taking medicines No special diet Normal body mass index Absence of orthopedic and neurological diseases Absence of surgery on spine and pelvis Not having a rheumatic disease Having a normal curvature of the lumbar angle (20-45) Not having problems related to the sciatic nerve

Exclusion criteria:

Willingness to withdraw at any time from the implementation of the training program or before and after the test Being absent for more than two continuous sessions or more than three non-continuous sessions during the implementation of training programs Injury during the implementation of the research period Implementation of other rehabilitation programs during the research

Age

From **20 years** old to **40 years** old

Actual sample size reached: **45**

Randomization (investigator's opinion)

Randomized

Randomization description

The method of grouping people is using the random block method. Participants are divided to three groups of 15 people: the first group received dynamic neuromuscular stability exercises, the second group received Barreausol exercises, and the third group, which is the control group, will not do any activity.

Blinding (investigator's opinion)

Double blinded

Blinding description

All the participants in this research did not have any knowledge about the way of grouping, receipt of training programs, and the research process and they were placed in groups A, B, and C. And no information

about the aforementioned groups has been provided to the data analyzer and statistician.

Health conditions studied

1

Description of health condition studied

Low back pain

ICD-10 code

M54.5

ICD-10 code description

Low back pain

Primary outcomes

1

Description

Pain

Timepoint

Pre-test and post-test

Method of measurement

measurement of pain using Visual Analogue Scale ruler

2

Description

Functional disability

Timepoint

Pre-test and post-test

Method of measurement

Oswestry Disability Questionnaire

3

Description

Muscle Endurance

Timepoint

Pre-test and post-test

Method of measurement

Beiring Sorensen test

4

Description

Mobility

Timepoint

Pre-test and post-test

Method of measurement

(MMST)test

Secondary outcomes

1

Description

Reducing social and economic damage caused by reducing the presence of a person in society

Timepoint

Six weeks after the intervention

Method of measurement

Analysis of statistics and information

Intervention groups

1

Description

The first intervention group: dynamic neuromuscular stability exercises. During six weeks, the participants receive selected exercises three days a week for one hour. All exercises are presented from simple to advanced. The exercise program includes three parts: warm up, The main exercises are cooling down. These exercises start with low intensity and increase their intensity in the final sessions. The overload principle of gradual increase in each training session is controlled according to the correct implementation and training pressure in the previous session.

Category

Rehabilitation

2

Description

second intervention group, barreusol exercise: during six weeks, the participants receive selected exercises three days a week for one hour, all exercises are presented from simple to advanced. the training program includes three sections: warm-up, main and cool down exercises. Training starts from a few exercises and is gradually added to. The repetition of movements at the end of the session is increased compared to the previous

session.

Category

Rehabilitation

3

Description

Control group:This group will not receive any activity during the research.
