Comparing efficacy neuromuscular Retraining and Botox in sequel of facial nerve palsy

Protocol summary

Summary

Synkinesis is one of the most unpleasant sequel of peripheral facial nerve palsy. It refers to the abnormal involuntary facial movement accompanying the voluntary movement of a different facial muscle group. The aim of this study was to investigate the efficacy of biofeedback and Botulinum A Toxin injection to improve synkinesis and symmetry in facial nerve palsy. The sequel of facial nerve palsy will be included. Upper motor neuron lesion, hemifacial spasm and bilateral facial nerve palsy will be excluded. 30 subjects with facial nerve palsy were randomly divided into two groups. The first group will receive Botulinum toxin A injection around the mouth and eye (synkinesis area). The control group, will take part in four-months rehabilitation program including Neuromuscular reeducation by biofeedback immediately after saline injection as a placebo. All subjects will be evaluated by facial grading system and video type. The final evaluation will be conducted four months after treatment. The Both groups will be compared using facial grading system.(Sunny Brook system).

Scientific title

Comparing efficacy neuromuscular Retraining and Botox in sequel of facial nerve palsy

Public title

Treatment sequel of facial nerve palsy

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion: incomplete recovery facial nerve palsy ; Asymmetry in facial muscles during Expression Exclusion : upper motor neuron lesion ; Bilateral facial nerve palsy ; hamifacial spasm palsy

Age

No age limit

Gender

Both

Phase

2-3

Groups that have been masked

No information

Sample size

Target sample size: 30

Randomization (investigator's opinion)

Randomized

Randomization description

Blinding (investigator's opinion)

Single blinded

Blinding description

Health conditions studied

1

Description of health condition studied

Facial palsy

ICD-10 code

G51.0

ICD-10 code description

Bell palsy

Primary outcomes

1

Description

Synkinesis

Timepoint

Before treatment

Method of measurement

Vedio type & sunny Brook Scale(facial grading scale)

2

Description

Asymmetry face

Timepoint

Before treatment

Method of measurement

Vedio type & sunny Brook Scale(facial grading scale)

Secondary outcomes

1

Description

Synkinesis

Timepoint

After treatment

Method of measurement

Vedio type & facial grading scale

2

Description

Asymmetry

Timepoint

After treatment

Method of measurement

Vedio type & facial grading scale

Intervention groups

1

Description

biofeedback group:Neuromuscular retraining for 4 months

Category

Treatment - Drugs

2

Description

botox A group: 15- 20 unite toxin type A (Dysport) injections in the face (around the synkinesis muscles)

Category

Rehabilitation
