The effect of motion-based self-care education on quality of life and life expectancy of patients with COVID-19

Protocol summary

Improving the quality of life and life expectancy of patients with COVID-19 in home quarantine.

Study aim

Determining the effect of self-care training based on motion graphics on the quality of life and life expectancy of patients with COVID-19 in Isfahan city in 2022

Design

The clinical trial has a control group with single blind and randomized parallel groups on 40 patients with COVID-19 and random numbers table is used for randomization.

Settings and conduct

The study was conducted in the office of Dr Morteza Pourahmad (specializing in infectious diseases), during which 40 patients of COVID-19 who needed home quarantine were randomly divided into control and intervention groups, and then to the patients of the intervention group with motion graphics about nutrition. Patients during the recovery period, how to take drugs and drug and nutritional interactions, the principles of proper quarantine in a separate or shared room, use of common or separate sanitary facilities, principles of disposing of patient waste, duration of quarantine and issues related to after getting out of quarantine, tips related to the possibility of re-infection with the COVID-19 disease, time of corona vaccine injection, signs and symptoms of worsening of the disease, respiratory physiotherapy and psychological issues related to the quarantine period, were given and the patients of the control group were given PDF file. Data collection is done before and after the intervention.

Participants/Inclusion and exclusion criteria

Age between 20-65; Suffering from cancer diseases, history of using drugs that weaken the immune system

Intervention groups

The intervention group included patients with COVID-19 who will benefit from self-care training at home using motion graphics, and the control group included patients with COVID-19 who will benefit from self-care training at home in the form of a PDF file.

Scientific title
The effect of motion-based self-care education on quality of life and life expectancy of patients with COVID-19

Public title
The effect of motion-based self-care education on quality of life and life expectancy of patients with COVID-19

Purpose
Education/Guidance

Inclusion/Exclusion criteria
Inclusion criteria:
All patients have full consent to participate in the study. Patients only need home quarantine. The patients of the intervention group should have mobile phones with the ability to run motion graphics. Control group patients should have mobile phones with the ability to run PDF. Control group patients should have enough literacy to read and use PDF. Intervention group patients should have good hearing. Patients should be in the age range of 20-65 years. No cancer diseases, no history of organ transplant surgeries and no use of drugs that weaken the immune system.
Exclusion criteria:
The people present in the study are not willing to continue cooperating with the research team at any stage of the research and for any reason. Worsening of the disease and requiring hospitalization. Failure to complete or incomplete completion of any of the quality of life and life expectancy questionnaires.

Age
From **20 years** old to **65 years** old

Gender
Both

Phase

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Randomization description
Simple randomization will be done using permutation block in such a way that intervention group patients will be given code A and control group patients will be given code B, and then the blocks will be determined by lottery and for example If the first block is AB, it means that the first patient who meets the study entry criteria will be in the intervention group and the second patient who meets the study entry criteria will be in the control group, and we will have twenty blocks in total.

Blinding (investigator's opinion)
Single blinded

Blinding description
In this project, the data analyst will not be aware of which patients are in the intervention group and which are in the control group.

Placebo
Not used

Primary outcomes

1

Description

The quality of life score from the standard quality of life questionnaire SF-36 in patients with COVID-19

Timepoint

The measurement of quality of life at the beginning of the study (before the intervention) and 14 days after receiving self-care training at home

Method of measurement

Standard questionnaire of quality of life SF-36

2

Description

Life expectancy score from Snyder's standard life expectancy questionnaire in patients with COVID-19

Timepoint

The measurement of Life expectancy at the beginning of the study (before the intervention) and 14 days after receiving self-care training at home

Method of measurement

Standard Snyder Life Expectancy Questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Intervention group: Receiving self-care education motion graphics (in the areas of feeding patients during the recovery period, how to take drugs and drug and nutritional interactions, principles of appropriate quarantine in a separate room or a shared room, using a shared toilet and bathroom with other family members or Separately, the principles of disposing of patient waste, the duration of quarantine and issues related to after leaving quarantine, points related to the possibility of re-infection with COVID-19, the time of corona vaccine injection, signs and symptoms of worsening of the disease, respiratory physiotherapy and psychological issues. Related to the quarantine period and topics related to fasting in the holy month of Ramadan in patients with COVID-19).
