Effects of dry needling on subscapularis and conventional physiotherapy on clinical symptom improvement in people with frozen shoulder

Protocol summary

Study aim

the aim of this study is to investigate the effect of dry needling on the trigger points of the subscapularis muscle and to improve the clinical symptoms of people with frozen shoulder.

Design

Randomized clinical trial with the control group, with parallel groups, single-blinded, on 40 patients, randomization allocation software will be used for randomization.

Settings and conduct

Patients randomly will be divided into two groups. The first group (intervention group) will receive dry needling of the subscapularis muscle during 3 sessions. At the same time, They also benefit from conventional physiotherapy treatment, but the control group will only use conventional physiotherapy treatment.

Participants/Inclusion and exclusion criteria

Inclusion criteria: subjects were diagnosed with frozen shoulder . the presence of active trigger points in the subscapularis muscle Exclusion criteria: needle phobia

Intervention groups

The intervention group consists of patients with frozen shoulder. Routine physiotherapy includes Continuous ultrasound with a frequency of 3 MHz for 6 minutes, high-intensity electric current with a frequency of 100 Hz and diversion of 20 minutes, hot pack simultaneously with the application of the current. Postero-anterior, Antero-posterior and caudal glides. The shoulder muscles stretching and active-assistive exercises using a towel as well. They also will receive 3 sessions of dry needling. The control group consists of patients with frozen shoulder who will only receive routine physiotherapy.

Main outcome variables

Shoulder range of motion; intensity of pain in trigger points of the subscapularis muscles and shoulder joint; Pain pressure threshold of trigger points; Upper limb functional disability

Scientific title

Effects of dry needling on subscapularis and conventional physiotherapy on clinical symptom improvement in people with frozen shoulder

Public title
Effects of dry needling and physiotherapy in patients with frozen shoulder

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
Those who have been diagnosed with frozen shoulder by a doctor and have symptoms such as pain and reduced range of motion in the capsular pattern in the shoulder joint for 3 months or more age between 35 and 65 years old the presence of active trigger points in the subscapularis muscle on the involved side Pain intensity of at least 3 out of 10 in the VAS

Exclusion criteria:
skin problems in the neck and shoulder area Antiplatelet therapy has been used in the three days before the start of the study In the six months before starting the study, they had a history of cancer and related pain in the shoulder and pectoral region In the three months before the start of the study, they used corticosteroid injections in the shoulder area needle fobia Non-cooperation during treatment Shoulder arthroscopy surgery cervical radiculopathy or any neurological injury in upper limb Patients with rheumatoid or neurological diseases Patients who use pace makers Patients with positive subacromial entrapment tests

Age
From **35 years** old to **65 years** old

Gender
Both

Phase
N/A

Groups that have been masked

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Randomization description
Simple randomization with a sealed envelope: Two envelopes are prepared with the first and second group titles. Each participant randomly selects one envelope and the envelope number is recorded for the participant. The envelopes are then merged and the next participant selects another envelope from the two envelopes as the previous procedure to complete the randomization process in both groups.

Blinding (investigator's opinion)
Single blinded

Blinding description
evaluator is blind to the type of intervention in each group

Placebo
Not used

Assignment
Parallel

Health conditions studied

1

Description of health condition studied
frozen shoulder

ICD-10 code
M75.00

ICD-10 code description
Adhesive capsulitis of unspecified shoulder

Primary outcomes

1

Description
Range of motion of shoulder joint

Timepoint
before and after intervention

Method of measurement
goniometer

Secondary outcomes

1

Description
pain intensity of trigger point

Timepoint
before and after intervention

Method of measurement
Visual analog scale

2

Description
pain intensity of shoulder joint
Timepoint
before and after intervention
Method of measurement
visual analog scale (VAS)

3

Description
Pain pressure threshold of trigger points
Timepoint
before and after intervention
Method of measurement
algometer

4

Description
Upper limb functional disability
Timepoint
at first, fifth and tenth of treatment sessions
Method of measurement
disability of arm, shoulder and hand (DASH)

Intervention groups

1

Description
Intervention group: In addition to receiving the subscapularis dry needling during 3 sessions (in the 3rd, 6th, and 9th sessions of treatment) with a sterile dong bang needle with a size of 30*50 mm, the patient receives conventional physiotherapy treatment provided by the physiotherapist. Conventional treatment includes the use of continuous ultrasound with a frequency of 3 MHz for 6 minutes around the joint capsule, the use of high intensity electric current with a frequency of 80 Hz and diversion for 20 minutes, and the use of a hot pack simultaneously with the application of the current. For the involved shoulder, postero-anterior, antero-posterior and caudal glides can be used with a speed of 2 to 3 glides per second and for a total of 30 seconds for each set. The number of sets for each movement is 5 and the rest time between sets is 30 seconds. We ask the patient to stretch the shoulder muscles as well. The duration of each stretch is 30 seconds and the interval between them is 15 seconds and it is done during 3 sets. We ask the patient to do active-assistive exercises using a towel for 5 minutes a day. The number of conventional treatment sessions is 10 sessions, every other day.
