

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Comparison between the different type of corrective exercises along with Diet on Anterior Pelvic Tilt in obesity Impacting Low Back Pain Patients

Protocol summary

Study aim

To find out the evidence about the improvement in body weight and its impact on the biomechanical changes of pelvis and lumbar spine after Dieting alone, Diet +Soft tissue release, Diet +Strength exercise, Diet +Aerobic exercise as well as comparing the biomechanical characteristics between these groups to find out the best method for the management of low back pain.

Design

This is a single blind randomized clinical trial study. 80 participants will be randomly allocated into 4 groups and total 6 weeks interventions would be given consisting of 5 sessions per week (30 sessions) for exercises and soft tissue release group along with continuous dieting.

Settings and conduct

Data would be collected randomly from Karachi, Pakistan population referred to physiotherapy clinic. Before and after 6 weeks interventions, outcome measurements will be assessed in each group.

Participants/Inclusion and exclusion criteria

Non specific low back pain; age between 25 to 40years; Anterior pelvic more than 13.5 degree; Grade I and II obesity without Current dermatological or inflammatory illness,Recent fracture, Congenital lower extremity abnormalities, Breathing difficulties,Cardiovascular, pulmonary, hepatic, renal, and hematological disorders

Intervention groups

The participants aged between 25-40 years will be assigned in four groups according to their BMI. A comprehensive Rehabilitation plan would be formulated after assessment, incorporating diet only as control group, diet +soft tissue release, diet +strengthening exercise group and diet +aerobic exercise group, all following 500 kcal diet deficit in their daily caloric requirement.

Main outcome variables

Pain; disability; Quality of life; pelvic tilt; body fat percentage; muscle strength; muscle thickness; aerobic fitness,waist hip ratio; muscle length for rectus femoris

and iliopsoas

Scientific title

Comparison between the different type of corrective exercises along with Diet on Anterior Pelvic Tilt in obesity Impacting Low Back Pain Patients

Public title

Comparison between the different corrective exercises along with Diet on improvement of Low Back Pain Patients

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Subjects with NSLBP Age between 25 to 40years Anterior pelvic tilt more than 13.5 degree Grade I and II obesity

Exclusion criteria:

Dermatological or inflammatory illness Recent fractures Congenital lower extremity abnormalities Cardiovascular, pulmonary, renal and hematological disorders

Age

From **25 years** old to **40 years** old

Gender

Both

Phase

N/A

Groups that have been masked

- Outcome assessor

Sample size

Target sample size: **80**

Randomization (investigator's opinion)

Randomized

Randomization description

Subjects in this study are randomly placed in one of the three study groups based on random number table and receive the intervention related to the same group.

Blinding (investigator's opinion)

Single blinded

Blinding description

assessor is blind regarding to the groups and interventions.

Placebo

Not used

Health conditions studied

1

Description of health condition studied

low back pain

ICD-10 code

S30.0

ICD-10 code description

Contusion of lower back and pelvis

Primary outcomes

1

Description

pain

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

according to the Visual analog scale

2

Description

Disability

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

Oswestry Disability Index questionnaire

3

Description

Quality of life

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

SF-36 questionnaire

4

Description

Pelvic Tilt

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

photogrammetry

5

Description

body composition

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

Bioelectrical impedance analysis

6

Description

Muscle strength

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

Dynamometer

7

Description

Muscle thickness

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

Ultrasounography

8

Description

Aerobic Fitness

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

Bruce Protocol

9

Description

Waist-Hip Ratio

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

circumference of the waist to that of the hips by tape

10

Description

muscle length

Timepoint

before treatment, at the end of treatment (after the 6th week)

Method of measurement

Thomas Test

Secondary outcomes

empty

Intervention groups

1

Description

Control group: The participants would be assessed by a nutritionist and their basal metabolic rate (BMR) would be calculated and finally Recommended Caloric Requirement (RCR) calculation. In RCR 500 kcal deficit would be given which is equivalent to one pound of fat which contains 3500 kcal in week. The participants will follow the regimen for 6 weeks.

Category

Rehabilitation

2

Description

Intervention group: Diet + Soft tissue release Group, This group would follow the same diet of control group. In Addition soft tissue release for Iliopsoas and Rectus femoris would be given for 6 weeks, 5 times per week (30 sessions)

Category

Rehabilitation

3

Description

Intervention group: Diet + Strengthening exercise Group, The same protocol for diet would be given. In addition strengthening training for Pectoralis major , Lattismus Dorsi , Deltoid , Trapezius , Biceps, Triceps, Quadriceps , Hamstrings, Rectus abdominus , Erector spinae and Gastrocnemius soleus would be formulated and supervised for 6 weeks, 5 sessions per week (30 sessions).

Category

Rehabilitation

4

Description

Intervention group: Diet + Aerobic exercise Group, The same protocol for diet would be given. In addition aerobic training which will be apply by exercise between 70% to 75% of Max Heart Rate for 40 minutes per session for 5 days per week for 6 weeks (30 sessions).
