

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Investigating the effect of play on self-esteem and quality of life of hearing impaired children

Protocol summary

Study aim

Determining the effect of group play on self-esteem and quality of life in hearing impaired children

Design

A clinical trial with a control group, with parallel groups, one-blind, randomized, on 62 hearing-impaired children, block randomization was performed.

Settings and conduct

This study is conducted in a one-sided blind way at Nyusha Center for the Hearing Impaired in Hamedan. The data analyst will be blinded

Participants/Inclusion and exclusion criteria

Entry conditions: willingness of participants and their parents, hearing impairment to hear sounds with a frequency of 30 dB Exclusion criteria: children undergoing psychiatric or psychological treatment, having physical, mental, developmental, behavioral disorders

Intervention groups

In the study, children in the control group received routine training, and children in the intervention group will be trained in a group game under the supervision of the researcher in 10 sessions, one session a week, for 2.5 months. Each game session will last about 45 minutes.

Main outcome variables

Quality of Life; Self-esteem

Scientific title

Investigating the effect of play on self-esteem and quality of life of hearing impaired children

Public title

Play on self-esteem and quality of life of hearing impaired children

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Children and their parents should be satisfied with their

participation in the study Children aged 8 to 12 who have hearing loss Not having other physical, mental, developmental, behavioral disorders Children should not be under psychiatric or psychological treatment Inability to hear sounds with a frequency of 30 dB in one or both ears

Exclusion criteria:

The reluctance of parents and children to participate in the studying Children undergoing psychiatric or psychological treatment Having physical, mental, developmental, behavioral disorders

Age

From **8 years** old to **12 years** old

Gender

Both

Target sample size: **62**

Randomization (investigator's opinion)

Randomized

Randomization description

The method of random allocation of samples in two intervention and control groups was block random. For random allocation of samples in two control and intervention groups, 6 types of blocks of 4 will be used in the form of block random allocation with replacement method. In this way, the letter A for the intervention group and the letter B for the control group will be considered using a simple random method. We will write the following blocks on the pieces of paper and put them in the envelope and remove them randomly. Then, according to the possible order of sampling, it will start as AABB, BBAA, ABBA, BAAB, ABAB, BABA. Based on the order of the letters of the blocks, children will be assigned to the intervention or control group. Then the next blocks will be selected in the same way.

Blinding (investigator's opinion)

Single blinded

Blinding description

With the coordination of the center manager, the people who are in the test group will visit on even days and the people in the control group will visit on odd days. The statistical analyst also does not know the allocation of people in the intervention and control groups and their names
