

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Comparison of the effects of pelvic floor muscle strengthening exercise, pelvic floor muscle strengthening exercise plus hip rotator muscle exercise, and pelvic floor muscle strengthening exercise plus electrical stimulation on the symptoms of women with stress and mixed urinary incontinence

Protocol summary

Study aim

Comparison of the effectiveness of functional intravaginal electrical stimulation and pelvic floor and pelvic external rotator muscle strengthening exercises on urinary incontinence

Design

Clinical trial with 3 groups , with parallel groups, single - blind, randomized, on 60 patients. Sealed envelopes will be used for randomization

Settings and conduct

This study will be conducted in Isfahan city, in two rehabilitation faculty centers and in the pelvic floor clinic. The study will be conducted in a single-blind manner and the participants(patients) will be blind.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Women diagnosed with stress and mixed urinary incontinence by a urologist,Average age between 30-65 years,Absence of pregnancy and a one-year postpartum period, No receive medical or surgical treatment for urinary incontinence,Absence of any urinary-genital infection,Absence of neuromuscular diseases, Absence of severe pelvic prolapse Exclusion criteria: Any problem that may interfere with the continuation of the treatment, Patient's lack of consent to continue the treatment

Intervention groups

Group 1:In this group, patients will receive feedback from the performance of the muscles while performing pelvic floor exercises using the EMG biofeedback device. Group 2:In this group, in addition to the exercises of the first group, patients will perform pelvic rotator muscle exercises. Group 3:In addition to the treatment of first group, this group will receive electrical stimulation of the pelvic floor.

Main outcome variables

Quality of life questionnaire, The number of unwanted urinations ,Pelvic floor muscle strength ,Strength of external hip rotator muscles

Scientific title
Comparison of the effects of pelvic floor muscle strengthening exercise, pelvic floor muscle strengthening exercise plus hip rotator muscle exercise, and pelvic floor muscle strengthening exercise plus electrical stimulation on the symptoms of women with stress and mixed urinary incontinence

Public title
Evaluation of the effects of pelvic floor muscle strengthening exercise plus hip rotator muscle exercise on the stress urinary incontinence

Purpose
Health service research

Inclusion/Exclusion criteria
Inclusion criteria:
Women diagnosed with stress and mixed incontinence by a urologist Average age between 30-65 years Absence of pregnancy and a one-year postpartum period No receive medical or surgical treatment for incontinence Absence of genital area disease Absence of neuromuscular diseases Absence of severe pelvic prolapse
Exclusion criteria:
Any problem that may interfere with the continuation of the treatment The patient's lack of consent to continue the treatment

Age
From **30 years** old to **65 years** old

Gender
Female

Phase
N/A

Groups that have been masked

- Investigator
- Outcome assessor

Sample size
Target sample size: **60**

Randomization (investigator's opinion)
Randomized

Randomization description
Patients are randomly assigned to three groups. Patients are explained in advance about being placed in one of these three treatment groups and it is understood that you will be placed in one of these three groups. Then, to observe the random assignment of patients, envelopes will be prepared containing the methods of treatment groups, and the patient will choose one of them. Accordingly, the patient will enter his treatment group.

Blinding (investigator's opinion)
Single blinded

Blinding description

In this study, patients know that they will participate in one of the treatment groups. The therapist and the assessor are blind to the grouping. It will be planned so that participants in different treatment groups do not face each other and there will be no contact between them.

Health conditions studied

1

Description of health condition studied

stress and mix urinary incontinence

ICD-10 code

N39.3

ICD-10 code description

Stress incontinence (female)

Primary outcomes

1

Description

Unwanted leakage of urine in one day

Timepoint

At the beginning of the study, after 6 weeks in the last session

Method of measurement

questionnaire

2

Description

Quality of life

Timepoint

At the beginning of the study, after 6 weeks in the last session

Method of measurement

questionnaire (I-QOL)

Secondary outcomes

1

Description

Pelvic floor muscle strength

Timepoint

At the beginning of the study, after 6 weeks in the last session

Method of measurement

Perineometer instrument ,Electromyography

Intervention groups

1

Description

Control group: the patients, three times a week, when performing pelvic floor exercises alongside an EMG biofeedback device, will receive feedback on the functioning of the muscles. Patients will be treated and controlled with biofeedback for 15 minutes

Category

Rehabilitation

2

Description

First intervention group: in this group, in addition to the exercises, they will perform the exercises of the pelvic external rotator muscles.

Category

Rehabilitation

3

Description

Second Intervention group: In addition to the exercises, this group will receive electrical stimulation of the pelvic floor. In this group of patients, they also be treated three times a week and along with pelvic floor exercises, intravaginal electrical stimulation is performed by a vaginal probe (50 Hz, 200 microseconds for 15 minutes).
