Evaluation of the possible hypnotic impact of Brassica oleracea product in patients with insomnia

Protocol summary

Study aim

Evaluation of the possible hypnotic impact of Brassica oleracea product in patients with insomnia

Design

Randomized clinical trial using cards lottery method, two parallel intervention and control groups, 86 patients (43 people in each group)

Settings and conduct

This clinical trial will be performed on 86 patients aged 18 to 60 who suffer from a sleep disorder. Patients are randomly divided into three groups of 43, the first group receiving 1 capsule of a placebo, and the second group receiving 1 capsule of the extract every day for 4 weeks. The sleep quality of both groups was measured by Pittsburgh standard sleep quality questionnaire before and after the intervention.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patient 18 to 60 years old; Sleep problems in recent weeks, with no history of allergic reactions to red cabbage or its derivatives. Exclusion criteria: History of any mental disorder, failure to return for evaluation at the end of the course

Intervention groups

Group 1: recipients of placebo capsules. Group 2: recipients of red cabbage extract capsules.

Main outcome variables

Change of score in the Petersburg Questionnaire before the start of the study and at the end of the study based on the Petersburg Questionnaire

Scientific title

Evaluation of the possible hypnotic impact of Brassica oleracea product in patients with insomnia

Public title

The effect of red cabbage on insomnia

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Non-pregnant men and women 18 years or older

Sleeping problem in recent weeks No history of allergic reactions to red cabbage or its derivatives Having enough literacy to read and understand the questionnaire and answer the questions alone

Exclusion criteria:

History of any mental disorder History of serious cardiovascular, liver, kidney or other systemic diseases History of addiction or smoking History of abnormal thyroid function tests History of taking anti-depressant or anti-psychotic drugs two weeks before entering the study Occurrence of allergic reactions to the capsules and their contents during the study period

Age

From **18 years** old to **60 years** old

Gender

Both

Phase

1-2

Sample size

Target sample size: **86**

Randomization (investigator's opinion)

Randomized

Randomization description

The numbers from 1 to 86 are written on 86 papers and placed inside a bag. Even numbers are for intervention group and odd numbers are for control group. Each time a patient enters the study according to entry criteria, a paper is removed from the bag and the number written on the paper is the base of entering to each group.

Blinding (investigator's opinion)

Double blinded

Blinding description

Healthcare personnel, data collection authorities and those who evaluate the outcome are completely uninformed about the recipient groups. It should be noted that the patient is aware of the clinical trial but does not know whether he is taking the placebo or the main drug.

Intervention groups

1

Description

Control group: Receiving the same form of capsule prepared from red cobbage extract with starch powder without red cobbage in the unique shapes for all groups. It is noteworthy that these capsules are made at the Mashhad Medical Sciences University and at the Pharmacological Research Center of Medicinal Plants. The capsules administrate one dosage every night for 4 weeks. Also, the patient is told to promptly inform the investigators if certain symptoms indicating the side effects of the drug or the sensitivity to the drug.
