Comparative Effect of Kinesio taping with and without conventional physical therapy in obese women with pes planus.

Protocol summary

Study aim

The aim of this study is to Compare effects of Kinesio taping with or without conventional physical therapy in obese women with pes planus.

Design

A single blinded randomized controlled trial, conducted on 72 patients, equally divided into two groups, single centered study.

Settings and conduct

The university of Lahore teaching hospital, single blinded study.

Participants/Inclusion and exclusion criteria

Age of young adults (25-60) years having navicular drop with BMI Body mass index (BMI, kg/m²) above(<25) considering obese female are included and Skeletal or structural injury of lower extremities, Ankle sprain or surgery within 6 months, Any nervous system diseases or Any nervous system diseases are excluded.

Intervention groups

70 patients will be randomly divided into control and experimental groups. The control group will receive kinseio taping while the experimental group will receive kinesio taping along with conventional physical therapy.

Main outcome variables

Navicular Drop, Foot Functionality.

Scientific title

Comparative Effect of Kinesio taping with and without conventional physical therapy in obese women with pes planus.

Public title

Comparative Effect of Kinesio taping with and without conventional physical therapy in obese women with pes planus.

Purpose

Health service research

Inclusion/Exclusion criteria

Inclusion criteria:

• Age of young adults (25-60) years • Having a navicular drop distance • Obese Females Body mass index (BMI, kg/m²) above(<25

Exclusion criteria:

• Skeletal or structural injury of lower extremities • Ankle sprain or surgery within 6 months • Any nervous system diseases • Any lower limb deformities • Unwillingness to continue the study

Age

From **25 years** old to **60 years** old

Gender

Female

Randomization (investigator's opinion)

Randomized

Randomization description

By using computer generated random number table, patients will be randomly assigned into two groups. All those random numbers will be enclosed in sealed envelopes. A third person (who will further not be the part of research) will open envelopes and the patients will be allocated to the mentioned group accordingly.

Blinding (investigator's opinion)

Single blinded

Blinding description

An independent assessor, who will be a senior and experienced physiotherapist and further will not be the part of study will perform the assessment of patients

Placebo

Health conditions studied**1****Description of health condition studied**

Pes Planus

ICD-10 code

M21.40

ICD-10 code description

Flat foot [pes planus] (acquired), unspecified foot

Primary outcomes**1****Description**

Navicular drop, Foot Functionality

Timepoint

Before intervention and after 4 weeks of intervention

Method of measurement

Staheliplanter Arch Index, Navicular Drop Test (NDT), Foot Function Index

Secondary outcomes**1****Description**

Foot Functionality

Timepoint

Before intervention and after 4 weeks of intervention

Method of measurement

Foot Function Index

Intervention groups**1****Description**

Group A: This group will receive kinesio taping , Kinesio Tape (KT) applied In the prone position, the participants flexed their knee and 3 strips of Kinesio tape (Kinesio® TexGold™ FP, U.S.A) with 100% tension in the middle were applied on the transverse arch, aiming to enhance its static stability. Another strip of Kinesio tape with 75% tension was applied on the tibialis posterior, from the fifth metatarsal head, around the navicular and posterior medial malleolus to half of the tibia. The tapes were warmed by rubbing them immediately after application to maximize adhesion.

2**Description**

Group B: This group will receive kinesio taping (KT) with conventional physical therapy exercises Heel raises:

Patient was in standing position and has to perform heel raises 20 times. (Without shoes),TA Stretching: The patient was taken in supine position Researcher was positioned to side of the patient and applied a passive stretch leading to 30 sec hold and was repeated 5 times each session, Toe Spreading exercises: The patient was in sitting or standing position and shall be instructed to stabilize the ball of the foot on the ground while lifting and spreading out the toes, Frequency: 20 times, intensity: 5 sec holds, type of contraction: isometric contraction ,Toe extension exercises: The patient was in sitting or standing position and was instructed to lift the big toe against the floor. Frequency: 20 times, intensity: 5 sec holds, type of contraction: isometric contraction Each exercise will be of 2 sessions a day.
