Randomization (investigator's opinion)

Randomized

Randomization description

The research samples will be entered into the study by the available method as individual units and by simple randomization and coin toss and will be allocated to two intervention and control groups. In order not to meet the control group with the intervention group for the purpose of concealment, we first sample the control group and then the intervention group.

Blinding (investigator's opinion)

Not blinded

Health conditions studied

1

Description of health condition studied

stroke

ICD-10 code

Z82.3

ICD-10 code description

Family history of ischaemic heart disease and other diseases of the circulatory system

Primary outcomes

1

Description

Caregiving burden of health-related quality of life

Timepoint

before the intervention and 3 weeks after the intervention

Method of measurement

In this study, the care burden variable is the burden of burden questionnaire and the health-related quality of life variable is the 12-question quality of life questionnaire.

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: The intervention is carried out in the form of educational content, pamphlets, educational videos in the form of one-on-one sessions for 30 minutes once a week

Category

Rehabilitation

2

Description

Control group: In this group, after the end of the intervention in the test group, which will last for 3 months. After 3 months, the educational content will be provided to the control group.
