Randomization (investigator's opinion)

Randomized

Randomization description

Participants randomly divide into two groups through the www.random.org.com website in which 10 Adults will be in the experimental group and 10 Adults will be in the control group for this study. The control group may receive standard care, other group will waiting the intervention of experimental group. There will be 20 participants in the groups.

Blinding (investigator's opinion)

Single blinded

Blinding description

The data analysts responsible for conducting statistical analyses and interpreting study outcomes will be kept unaware of the group assignments of participants. other hand outcome assessors, responsible for conducting interviews, assessments, and collecting data related to

study outcomes, will also be blinded to participant group assignments.

Study on Alcohol Abusers

When the data will become available and for how long

This process time will be 15-09-2023 to 15-10-2023

To whom data/document is available

Data and documents related to research participants will be handled with strict confidentiality and privacy protections. Access to these data/documents should be limited to individuals who have been authorized and trained to handle sensitive information in accordance with ethical and legal guidelines.

Under which criteria data/document could be used

Intervention plan will be provided

From where data/document is obtainable

amirhayatkallu02@gamil.com

What processes are involved for a request to access data/document

in the starting baseline assessment of both group than treatment will give to the experimental group and control group will be waiting than the check severity level after the intervention, the hypothesis present study is, CBT and Twelve steps program effectively reduce alcohol consumption of experimental group as compare to control group.
