Effect of aerobic exercise and Aphrodite supplement on the level of some oxidative stress factors and neurogenesis of transmitters related to mental and psychological disorders of postmenopausal women with depression

Protocol summary

Study aim

The aim of this study was to investigate the effect of twelve weeks of moderate-intensity aerobic exercise and Aphrodite supplement on level of some neural factors related to mental and psychological disorders of postmenopausal women

Design

200 married postmenopausal women are divided into four groups. The first group, the control group, the second group, the program of aerobic exercises, walking and light jogging with moderate intensity of 65-70% heart rate on the treadmill for twelve weeks, the third group, twelve weeks of aerobic exercise plus two doses per day of Aphrodite supplement, and the fourth group only two doses per day of the supplement. Aphrodite

Settings and conduct

Study place: Mostaghni gym club. We will give a questionnaire to 200 married postmenopausal women between 55 and 60 years of age with six-month LMP and serum estradiol less than 35 picogram per deciliter with healthy physical condition. Each of them is tested and sampled and then they are divided into four groups and they benefit from supplements and aerobic exercise for 12 weeks and at the end, the testing is done again.

Participants/Inclusion and exclusion criteria

Two hundred menopausal women residing in Isfahan Province, who had mild depression according to the Hamilton Depression Questionnaire, people should not have certain chronic and systemic diseases (especially cardiovascular problems) and should not take any other drugs during the study period.

Intervention groups

Participants were divided into six groups: control, aerobic exercise, aphrodisiac supplementation, and aerobic exercise+ aphrodisiac supplementation, based on the inclusion criteria.

Main outcome variables

Superoxide dismutase (SOD); malondialdehyde (MDA);

Scientific title
Effect of aerobic exercise and Aphrodite supplement on the level of some oxidative stress factors and neurogenesis of transmitters related to mental and psychological disorders of postmenopausal women with depression

Public title
Effect of aerobic exercise and supplement on ROS and neurogenesis in depressed postmenopausal women

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

6 months old LMP and serum estradiol less than 35 picogram per deciliter BMI between 26-29 Moderate depression using a questionnaire based on Beck anxiety inventory (BAI)

Exclusion criteria:

Not having any special chronic or systemic disorder

Age

From **55 years** old to **60 years** old

Primary outcomes

1

Description

Malondialdehyde(MDA)

Timepoint

Before starting the intervention and twelve weeks after that

Method of measurement

serum concentration of CGRP by ELISA method

2

Description

Superoxide dismutase(SOD)

Timepoint

Before starting the intervention and twelve weeks after that

Method of measurement

serum concentration of superoxide dismutase by ELISA method

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group 1: twelve weeks aerobic exercise, from 50 pre cent of HRm(in first week) to 70 pre cent of that in last five weeks

Category

Treatment - Drugs

2

Description

Intervention group 2: 12 weeks of aerobic training plus Aphrodite supplement twice a day (each capsule contains 40 mg of sea buckthorn fruit, 72.12 mg of ginger, 3.3 mg of saffron and 11 mg of cinnamon and weighs approximately 70 mg has it .

Category

Treatment - Drugs

3

Description

Intervention group 3: using Aphrodite supplement twice a day for twelve weeks (each capsule contains 40 mg of sea buckthorn fruit, 72.12 mg of ginger, 3.3 mg of saffron and 11 mg of cinnamon and weighs approximately 70 mg has it)

Category

Treatment - Drugs

4

Description

Control group: without intervention
