

Clinical Trial Protocol

Iranian Registry of Clinical Trials

27 Jul 2026

Effectiveness of core stability exercises on energy expenditure during gait in stroke patients

Protocol summary

Study aim

To determine the effect of core stability exercises on energy expenditure in stroke patients.

Design

A Randomized controlled trial

Settings and conduct

A study will be conducted at Rehman Medical Institute, Peshawar. Outcome assessor will be blinded.

Participants/Inclusion and exclusion criteria

Inclusion Criteria: • Stroke patients between 30 to 55 years of age • Both ischemic and hemorrhagic stroke. • Patients who experienced a single stroke. • Patients who can walk for 10 minutes on ground at a comfortable speed(with or without assistive device) • Patients having MMSE score of 24 or more. Exclusion Criteria: • Patients who has cerebellar and pontine stroke. • Patients who has orthopedic problems. • Patients who have vertigo, dizziness, angina or resting heart rate is not between 40-100bpm range. • Patients who cannot follow instructions given by the therapist.

Intervention groups

Control Group: Control group will receive the conventional physical therapy program for the stroke 20 minutes a day for 5 days a week. Conventional group will receive motor relearning program protocol. Experimental group: Experimental group each participant will have to attend a 6-weeks program of core stability exercises with 5 minutes each exercise, 5 days a week along with conventional physical therapy. Core stability exercises includes: 1. Bridging exercises 2. Unilateral pelvic bridging 3. Abdominal drawing in maneuver with leg lifts 4. Curl up.

Main outcome variables

10 m walk test and energy expenditure will be calculated by physiologic cost index formula.

Scientific title

Effectiveness of core stability exercises on energy expenditure during gait in stroke patients

Public title

Effectiveness of core stability exercises on energy expenditure during gait in stroke patients; A randomized controlled trial

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Stroke patients between 30 to 55 years of age Both ischemic and hemorrhagic stroke Patients who experienced a single stroke. Patients who can walk for 10 minutes on ground at a comfortable speed(with or without assistive device) Patients having MMSE score of 24 or more.

Exclusion criteria:

Patients who has cerebellar and pontine stroke. Patients who has orthopedic problems. Patients who have vertigo, dizziness, angina or resting heart rate is not between 40-100bpm range. Patients who cannot follow instructions given by the therapist

Age

From **30 years** old to **55 years** old

Gender

Both

Phase

Sample size

Target sample size: **50**

Randomization (investigator's opinion)

Randomized

Randomization description

In our trial, randomization will be conducted using a lottery method. The unit of randomization is the individual participant. For each participant, a unique identifier will be assigned, and these identifiers will be placed in separate, opaque, and sealed envelopes. The envelopes will be thoroughly mixed before a neutral third party, who is not involved in the trial, draws an envelope for each participant. The treatment assignment corresponding to the label inside the drawn envelope will determine whether the participant receives core stability exercises or conventional physical therapy program. This method ensures the transparency and fairness of the allocation process, eliminating any potential for selection bias. Allocation concealment will be maintained throughout the trial, as the envelopes will be securely stored and opened only at the time of participant allocation

Blinding (investigator's opinion)

Single blinded

Blinding description

The Randomized Controlled Trial (RCT) registry is designed to ensure complete blinding of the outcome assessor, guaranteeing the integrity and impartiality of the study's results. By maintaining strict confidentiality protocols and employing a comprehensive masking system, the registry safeguards against any potential biases that may arise from the assessor's knowledge of

the intervention groups, thereby enhancing the reliability and credibility of the trial's findings.

Health conditions studied**1****Description of health condition studied**

Brain stem stroke syndrome

ICD-10 code

G46.3

ICD-10 code description

Brain stem stroke syndrome

Primary outcomes**1****Description**

Physiological cost index

Timepoint

Pre assessment will be done on baseline assessment and Post assessment will be done after 6 weeks

Method of measurement

Physiologic cost index(PCI) is an indicator of energy expenditure that includes heart rate during gait along with speed and the formula used will be energy expenditure: walking heart rate-resting heart rate/walking velocity

Secondary outcomes

empty

Intervention groups

1

Description

Control group: The control group will receive the Modified Rehabilitation Program (MRP) for stroke patients three times a week, administered by trained physical therapists. The intensity of the MRP for the control group will be adjusted based on the patients' specific functional abilities, focusing on moderate-intensity exercises and activities to facilitate gradual recovery. Each session of the MRP for the control group will last for 30 minutes, ensuring an adequate duration to engage in a variety of tailored therapeutic exercises, functional tasks, and mobility training. The MRP for the control group will encompass a comprehensive range of evidence-based physical therapy techniques, including strength-building exercises, balance and coordination drills, as well as activities targeting range of motion and flexibility, tailored to the individualized needs of stroke patients.

Title and more details about the data/document

Effectiveness of core stability exercises on energy expenditure during gait in stroke patients; A randomized controlled trial

When the data will become available and for how long

Data will be available after completion of RCT and will be available for 1 year

To whom data/document is available

To all the researchers, students and teachers.

Under which criteria data/document could be used

All the authors registered with Iranian clinical trial registry

From where data/document is obtainable

Data will be available by emailing the principal author on raheela.naz@rmi.edu.pk

What processes are involved for a request to access data/document

Just email the author
