

Clinical Trial Protocol

Iranian Registry of Clinical Trials

11 Sep 2026

Effect of neurological music therapy on older adults with mild cognitive impairment

Protocol summary

Study aim

To determine the effect of neurological music therapy on cognitive function, emotional well being and quality of life among older adults with mild cognitive impairment.

Design

randomization simple random sampling technique with lottery method, parallel group

Settings and conduct

allied hospital Faisalabad

Participants/Inclusion and exclusion criteria

Both Male and female Presence of MCI (Montreal Cognitive Assessment score < 26) Being able to walk safely A low level of physical activity assessed by means of a physical activity questionnaire. Age 60-80 years En Older adults with visual impairment and those with hearing problems History of cardiovascular disease Presence of neurological disorder (Parkinson's disease, multiple sclerosis) Patients having Serious motor deficits Patient having difficulty in moving and communicating Left-handed or ambidextrous Patient having diagnosis of severe cognitive impairment such as dementia. Presence of depression

Intervention groups

The MMT group participated in a multi task MMT program consisting of exercise therapy with music and use of the Naruko clapper. The STT group participated in exercise sessions that involved the same movements as those in the MMT group. However, in these sessions, the instructor (single task) counted out the movements without accompanying background music or the Naruko clapper.

Main outcome variables

• Cognitive function • Physical Function • Quality of life

Sample size
Target sample size: **24**
Actual sample size reached: **20**

Randomization (investigator's opinion)
Randomized

Randomization description
simple random sampling technique with lottery method.

Blinding (investigator's opinion)
Single blinded

Blinding description
he individuals responsible for assessing or measuring the study outcomes are kept unaware of the participants' treatment group assignments or intervention status.

Placebo
Not used

Assignment
Parallel

Health conditions studied

1

Description of health condition studied
Mild cognitive impairment
ICD-10 code
F06.7
ICD-10 code description
A disorder characterized by impairment of memory, learning difficulties, and reduced ability to concentrate on a task for more than brief periods. There is often a marked feeling of mental fatigue when mental tasks are attempted, and new learning is found

Primary outcomes

1

Description
• Cognitive function
Timepoint
Before and after 6 week of intervention
Method of measurement
Mini-mental state examination (MMSE)

Secondary outcomes

1

Description
• Quality of life
Timepoint
Before and after 6 week of intervention
Method of measurement
SF 36 for Quality of life

2

Description
• Physical Function
Timepoint
Before and after 6 week of intervention
Method of measurement
International Physical Activity Questionnaire (IPAQ)

Intervention groups

1

Description
Active Control group: In this control group, an instructor

will guide the participants through the same exercises that will perform in the MMT group by giving counts only, without accompanying background music or use of the Naruko clapper. Both interventions will conduct once a week for 12 weeks.

Category

Rehabilitation

2

Description

Intervention group: In the MMT intervention group, each MMT session started with a 20 min warm-up period including about 5 min of light exercise completed in synchronization with background music. The next 15 min involved exercises with background music that aimed to strengthen leg muscles for fall prevention. This was followed by 30 min of MMT during which the participants used the Naruko clapper to accompany the music will play for 4 min, followed by 'March of 365 steps' (3 min), 'Hakodatenohito' (3 min), 'Palm in the sun' (3 min), 'Kiyoshi's Zundoko' (4 min), etc. Each session, will select 2 songs music and will repeat them for 30 min. These songs will repeat three times per one song, two songs per a session. It will include an explanation of each move, times to wipe sweat and to water supply between song and song for 2 min. The session will end with relaxation exercises, as well as deep breathing and massage to accompanying background music.

Effect of neurological music therapy on older adults with mild cognitive impairment

When the data will become available and for how long

15 days after publication

To whom data/document is available

Google scholar

Under which criteria data/document could be used

Access to the data will be facilitated through a specified mechanism, such as a secure online portal or data sharing platform. Requests for access will be reviewed by a designated committee or entity responsible for ensuring that they meet the established criteria and comply with relevant regulations and guidelines. Additional supporting information and documents may be provided to assist requesters

From where data/document is obtainable

The University of Faisalabad 38000 <https://tuf.edu.pk/> 00924187509715

What processes are involved for a request to access data/document

To receive the documents or data files, the process typically involves the following steps: 1. Request Initiation: The applicant submits a formal request specifying the documents or data files they need. 2. Verification and Authorization: The organization verifies the request and ensures that the applicant is authorized to access the requested documents or data files. This may involve confirming the identity of the requester and checking their permissions. 3. Processing Time: The processing time varies depending on the complexity of the request, the volume of documents or data files, and any legal or regulatory requirements. It could range from a few hours to several weeks. 4. Document Retrieval or Data Extraction: Once the request is approved, the organization retrieves the documents from their archives or extracts the requested data from their databases. 5. Quality Assurance: Before releasing the documents or data files to the applicant, the organization may conduct quality checks to ensure accuracy and completeness. 6. Delivery: The documents or data files are delivered to the applicant through a secure channel, such as encrypted email, secure file transfer protocols, or a secure online portal. 7. Confirmation of Receipt: The applicant acknowledges receipt of the documents or data files, confirming that they have received the information they requested.
