

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Investigating The Effect of The Educational-Supportive Program on The Quality of Recovery and Satisfaction with The Quality of Care of Patients Undergoing Thoracotomy due to Hydatid Cyst.

Protocol summary

Study aim

Determining the effect of educational-support program on the quality of recovery and satisfaction of patients undergoing thoracotomy due to hydatid cyst.

Design

A clinical trial with two intervention and control groups, with parallel groups, without blinding, randomized, phase three on 70 patients. SPSS software is used for randomization.

Settings and conduct

The research population is all patients with hydatid lung cyst candidates for thoracotomy surgery in the thoracic surgery department of Qaim Teaching Hospital (A). Blinding was not done in this study.

Participants/Inclusion and exclusion criteria

Inclusion criteria: patients with hydatid cyst who are candidates for thoracotomy surgery due to hydatid cyst and are willing to participate in the research. Exclusion criteria: patient death, patient unwillingness to participate in the study

Intervention groups

For the people in the intervention group, an educational-support program will be implemented from the beginning of their hospitalization and the day before the surgery in the hospital, in which, in addition to introducing and expressing sympathy and drawing the patient's attention, the patient will be given information about the course of the disease and surgical treatment, and a comprehensive pamphlet. which is prepared based on the educational needs of the patients and is provided to the patient. Exercises and techniques such as motivational spirometry will also be taught in the form of face-to-face demonstration and training with the patient. The contact number of the researcher is also provided to the patient. It is possible for the patient to share the ambiguities with the researcher at specific times in the morning and evening during the days of hospitalization.

The control group receives the usual hospital care and training.

Main outcome variables

The quality of recovery, the level of satisfaction with the quality of care

Randomization (investigator's opinion)

Randomized

Randomization description

Sampling will be Available with a Time Block with Random Allocation Generated by SPSS Software to Two Control and Test Groups. Code A Corresponds to The Test Group and Code B Corresponds to The Control Group and to Hide The Allocation, it will be Kept in a Sealed Envelope. After Ensuring The Eligibility of Each Person, The Door of the Envelope will be Opened and According to That Sequence will be Allocated to The Relevant Group. In Order to Prevent the Dissemination of Information, After Assigning The First Research Unit to

The Test Group, as Long as The Patients Selected for The Test Group are Present in The Ward, no Sampling will be done for The Control Group, and After The Discharge of The Patients of The Test Group, Sampling will be done. It will be done for The Control Group. The Control Group will be Treated in The Same way and as Long as The Patients of The Control Group Were Present in The Ward, No Sample will be Assigned to The Test Group. This Process will Continue Until The Completion of Sampling for Two Groups.
