Effects of Instrument-Assisted soft tissue mobilization (IASTM) and myofascial release (MFR) in alleviating post-surgical elbow stiffness

Protocol summary

Study aim

This study aims to evaluate the efficacy of myofascial release and instrument-assisted soft tissue mobilization (IASTM) in reducing pain, stiffness, and range of motion associated with post-surgical elbow stiffness.

Design

Randomized clinical trial, single blinded, parallel group, sample size 24

Settings and conduct

Ahmad Poly Care Clinic, Faisalabad (APCC) , Allied Hospital, Faisalabad (AHF)

Participants/Inclusion and exclusion criteria

Inclusion criteria: Male and female , Age 8-40 years, ROM of elbow extension ≥ -30 degrees & flexion ≤ 120 degrees, At least six weeks following surgery, with internal fixation and open reduction. Exclusion Criteria: Participants with any diagnosed auto-immune disorder, Pathological fractures, associated ipsilateral injuries, Injury to both upper limbs, Neuro-vascular disorders, IASTM contraindications (according to the IASTM guidelines), Rheumatic conditions, Circulatory disorders or diabetes.

Intervention groups

Baseline Treatment Both groups received conventional treatments, which included a 5- to 10-minute warm-up with active range-of-motion exercises for the shoulder, elbow, and wrist, gentle passive stretching with 30-second holds for three repetitions, and progressive low-load strengthening activities (for the major upper limb muscle groups). Group A Group A was administered IASTM therapy by means of the "S-shape tool," an ergonomic stainless-steel instrument with multiple hand grips that reduce operator fatigue. . Group B Group B received myofascial release technique was given. Myofascial release treatment is a kind of continuous, mild massage that helps your myofascial tissues become less painful and tense. Group C Group C received both Instrument-assisted soft tissue mobilization (IASTM) and Myofascial release technique (MFR) to check the effect of

both treatments collectively.

Main outcome variables

Pain, Range of motion, Functional disability

Scientific title
Effects of Instrument-Assisted soft tissue mobilization (IASTM) and myofascial release (MFR) in alleviating post-surgical elbow stiffness

Public title
How IASTM and Myofascial Release Alleviate Post-Surgical Elbow Stiffness"

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Male and female Age: 8-40 years ROM of elbow extension \geq -30 degrees & flexion \leq 120 degrees Least 6-week post-surgery with open reduction and internal fixation Patient with U/L or B/L post-surgical elbow stiffness Willing to participate were included in this study
Exclusion criteria:
Participants with any diagnosed auto-immune disorder Pathological fractures, associated ipsilateral injuries Bilateral upper extremity injuries Neuro-vascular disorders Contraindications for IASTM (as per the IASTM guidelines) Rheumatic conditions Circulatory disorders or diabetes Pregnancy Inability to Follow Rehabilitation Protocols

Age
From **8 years** old to **40 years** old

Gender
Both

Phase
3

Groups that have been masked

Sample size
Target sample size: **24**
Actual sample size reached: **24**

Randomization (investigator's opinion)
Randomized

Randomization description
The randomization will be done with the help of the lottery method. With a lottery method, each member of the population is assigned a number, after which numbers are selected at random

Blinding (investigator's opinion)
Single blinded

Blinding description
Single blinded: outcomes assessors were kept unaware of which participants received the experimental treatment and which received a comparative intervention. This blinding helps to prevent conscious and unconscious biases that could influence the assessment of study outcome.

Functional Disability

Timepoint

Baseline intervention and 3 weeks post intervention

Method of measurement

Liverpool elbow score

Intervention groups

1

Description

Intervention group: Group A received IASTM treatment, which was given by the "S-shape tool", that is an ergonomically designed stainless steel instrument and offers several different hands holds, eliminating operator fatigue. IASTM has drawn more attention for myofascial restriction based upon James Cyriax soft tissue mobilization.

Category

Rehabilitation

2

Description

Intervention group: Group B received myofascial release technique was given. Myofascial release therapy is a type of gentle, constant massage that releases tightness and pain throughout your myofascial tissues. Specific techniques include massage, pressure, skin rolling, twisting, and wringing. Applying pressure and stretch in the direction of the tissue restriction, reportedly causes myofascial lengthening and decreased muscle tension.

Category

Rehabilitation

3

Description

Intervention group: Group C received both Instrument-assisted soft tissue mobilization (IASTM) and Myofascial release technique (MFR) in order to check the effect of both treatments collectively.

Title and more details about the data/document

Effects of instrument -assisted soft tissue mobilization and myofascial release in alleviating post- surgical elbow stiffness Pain access by NPRS, Range of motion of elbow joint by Goniometer, Functional disability by Liverpool elbow score.

When the data will become available and for how long

30 days after publication.

To whom data/document is available

30 days.

Under which criteria data/document could be used

Access to the data will be facilitated through a specified mechanism, such as secure online portal or data sharing platform. Request for access will be renewed by designated committee or entity responsible for insuring that they made an established criteria and comply with relevant regulations and guidelines. Additional supporting information and document may be provided to assist requesters in understanding the available data and its potential application.

From where data/document is obtainable

The University of Faisalabad, 38000

What processes are involved for a request to access data/document

To receive the documents or data files, the process typically involves the following steps: 1. Request

Initiation: The applicant submits a formal request specifying the documents or data files they need. 2. Verification and Authorization: The organization verifies the request and ensures that the applicant is authorized to access the requested documents or data files. This may involve confirming the identity of the requester and checking their permissions. 3. Processing Time: The processing time varies depending on the complexity of the request, the volume of documents or data files, and any legal or regulatory requirements. It could range from a few hours to several weeks. 4. Document Retrieval or Data Extraction: Once the request is approved, the organization retrieves the documents from their archives

or extracts the requested data from their databases. 5. Quality Assurance: Before releasing the documents or data files to the applicant, the organization may conduct quality checks to ensure accuracy and completeness. 6. Delivery: The documents or data files are delivered to the applicant through a secure channel, such as encrypted email, secure file transfer protocols, or a secure online portal. 7. Confirmation of Receipt: The applicant acknowledges receipt of the documents or data files, confirming that they have received the information they requested.
