Comparative analysis of efficacy of muscle energy technique and static stretching techniques in enhancing flexibility following burn contracture in elbow

Protocol summary

Study aim
The study will be conducted to investigate the best technique in increasing flexibility in post burn contractures in elbow joint

Design
This study will be a Randomized clinical trial with a sample size of 60 burn patients with contractures who had decreased muscle flexibility as a result of partial thickness burn. Data will be selected through convenient sampling from the Burn Unit Ward of Allied Hospital, Faisalabad. However, Informed consent will be taken from participants. Palpation, Visual analogue scale and goniometer will be used for pre and post-assessment. Sixty patients will be divided into two groups, thirty in each group. Group (1): received Muscle Energy Technique (MET), Group (2): received 20 sec of static stretching exercise. Measurements of elbow extension range of motion were conducted before treatment, post 5 days of treatment, and after 8 days of treatment.

Settings and conduct
Burn Unit Ward of Allied Hospital, Faisalabad

Participants/Inclusion and exclusion criteria
Inclusion criteria: Age 20-50 years Gender (both) 2nd degree deep and 3rd degree burns in elbow Patients with unilateral tight elbow flexors Superficial skin grafted individual Subjects not involved in any exercise activity at the start of the study Exclusion criteria: history of serious pathology (e.g. malignancy, inflammatory disorder, infection) history of cervical radiculopathy hand deformities fractured or dislocated elbow

Intervention groups
Sixty patients will be divided into two groups, thirty in each group. Group (1): received Muscle Energy Technique (MET), Group (2): received 20 sec of static stretching exercise.

Main outcome variables
Pain; Range of motion

Scientific title
Comparative analysis of efficacy of muscle energy technique and static stretching techniques in enhancing flexibility following burn contracture in elbow

Public title
Efficacy of muscle energy technique and static stretching techniques in burn contractures of elbow

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
Age 20-50 years Gender (both) 2nd degree deep and 3rd degree burns in elbow Patients with unilateral tight elbow flexors Superficial skin grafted individual Subjects not involved in any exercise activity at the start of the study

Exclusion criteria:
History of serious pathology (e.g. malignancy, inflammatory disorder, infection) Fractured or dislocated elbow Hand deformities History of cervical radiculopathy

Age
From **20 years** old to **50 years** old

Gender
Both

Phase
N/A

Groups that have been masked

- Participant

Sample size
Target sample size: **60**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomization through lottery method. Each participant will be asked to choose between two pieces of paper labeled "Group A" and "Group B." They will be assigned to treatment groups based on the paper they select.

Blinding (investigator's opinion)
Single blinded

Blinding description
Patients will be blind in this clinical trial

Health conditions studied

1

Description of health condition studied
Contracture, elbow

ICD-10 code
M24.52

ICD-10 code description
Contracture, elbow

Primary outcomes

1

Description
Pain

Timepoint
Assessment will be conducted before treatment, post 5 days of treatment and after 8 days of treatment

Method of measurement
Visual analogue scale

2

Description
Range of motion

Timepoint
Assessment will be conducted before treatment, post 5 days of treatment and after 8 days of treatment

Method of measurement
goniometer

Secondary outcomes

empty

Intervention groups
