

Clinical Trial Protocol

Iranian Registry of Clinical Trials

23 Feb 2026

The effect of motion-graphic video-based training on students' knowledge, attitude and perception towards patient safety in operating room

Protocol summary

Study aim

Determining the effect of video-motion graphics based training on students' knowledge, attitude and perception towards patient safety in the operating room

Design

Clinical trial with control group, parallel groups, double-blind, randomized, on 80 students, random block generation software was used for randomization.

Settings and conduct

This study is conducted on the students of Shahrood University of Medical Sciences. Necessary trainings are sent to the intervention group via virtual space. It will be tried that the evaluator and the analyst are not aware of the information of the participants.

Participants/Inclusion and exclusion criteria

1. Students of the 6th semester and above in the field of operating room technology 2. Not participating in similar educational programs 3. Having access to ITA, IMO or Soroush communication software

Intervention groups

In the intervention group, they will receive 10 sessions of educational videos with motion graphics design, emphasizing the key points of patient safety based on international guidelines, including the following, through mobile phones twice a week using the communication software Imo, Ita or Soroush. In the control group, the researcher will conduct routine training for the educational content regarding patient safety in the usual way of lectures and discussions.

Main outcome variables

Knowledge, attitude and perception of students towards patient safety

Scientific title

The effect of motion-graphic video-based training on students' knowledge, attitude and perception towards

patient safety in operating room

Public title

The effect of motion-graphic video-based training on students' knowledge, attitude and perception towards patient safety in operating room

Purpose

Other

Inclusion/Exclusion criteria

Inclusion criteria:

Students of the 6th semester and above in the field of operating room technology Not participating in similar educational programs Having access to ETA, IMO or Soroush communication software

Exclusion criteria:

Absence of more than one training session Incomplete answers to questionnaires

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

- Investigator
- Data analyser

Sample size

Target sample size: **80**

Randomization (investigator's opinion)

Randomized

Randomization description

To allocate the samples, the block randomization method will be used with the block size of 4, so that by using the random number generation software in the block method, the randomization sequence will be produced according to the required sample size for two groups.

Blinding (investigator's opinion)

Double blinded

Blinding description

The evaluator of the study will not be informed of the random allocation and groupings, also in the statistical file and questionnaires, the groups are identified as codes, and the analyst will not be informed of the code allocation to the groups.

Placebo

Primary outcomes

1

Description

Students' knowledge of patient safety in the operating room

Timepoint

Before the intervention, immediately after the intervention and 3 months after the intervention

Method of measurement

Questionnaire of students' knowledge, attitude and perception towards patient safety

2

Description

Students' attitudes towards patient safety in the operating room

Timepoint

Before the intervention, immediately after the intervention and 3 months after the intervention

Method of measurement

Questionnaire of students' knowledge, attitude and perception towards patient safety

3

Description

Students' perception of patient safety in the operating room

Timepoint

Before the intervention, immediately after the intervention and 3 months after the intervention

Method of measurement

Questionnaire of students' knowledge, attitude and perception towards patient safety

Intervention groups

1

Description

Intervention group: In the intervention group, they will receive 10 sessions of educational videos with motion graphics design, emphasizing the key points of patient safety based on international guidelines, including the following, through mobile phones twice a week using the communication software Imo, Ita or Soroush. did 1. Medication errors, including prescribing the wrong medication, incorrect dosage, or prescribing medication to patients with allergies or contraindications, mistakes in preparation, labeling, etc. 2. Incidents related to patient safety in the operating room caused by equipment defects 3. Types of individual human errors in the operating room 4. Potential physical injuries 5. Patient positioning injuries 6. Damage caused by radiation 7. Damage caused by surgical items remaining in the patient's body 8. Injuries caused by falls, burns and pressure 9. Damage caused by fire and electrical damage 10. Medical errors
