Comparative Effects of Muscle Energy technique and Soft Tissue Technique for Tension headache Among Medical Students

Protocol summary

Study aim

The study aim is to evaluate which technique proved to be more effective Muscle energy technique or soft tissue technique to relieve Tension headache among medical students

Design

A randomized clinical trial with two parallel groups, a single blinded study with 10 patients in each group.

Settings and conduct

The study is conducted in Faisalabad on students who are studying in The University of Faisalabad, Govt College University Faisalabad. Study is single blinded; subjects are blinded in the study. Twenty subjects are divided in two groups containing 10 participants in each. Participants in group A received Muscle Energy Technique (PIR) 5 reps 3 sets with 10 seconds hold while Group B received Soft Tissue Technique (kneading in which Skin and soft tissues move in circular pattern, tissues are slowly lifted, rolled and squeezed). Both interventions were given 10-15 minutes per day for 20 days

Participants/Inclusion and exclusion criteria

Inclusion Criteria: Subjects of age 18-40 were selected. Both male and female subjects were selected. Subjects having tension headache that bilaterally located last from 30 min not associated with nausea or vomiting were selected. Exclusion Criteria: Subjects with any malignancy of cervical, upper limb and spine were excluded. Subjects with history of epilepsy, panic attacks were excluded. Subjects having collar on cervical region were excluded.

Intervention groups

Subjects are divided in two groups containing 10 participants in each. Participants in group A received Muscle Energy Technique. Group B received Soft Tissue Technique.

Main outcome variables

Pain, Impact of headache, disability

Inclusion/Exclusion criteria

Inclusion criteria:

Subjects of age 18-40 were selected. Both male and female subjects were selected Subjects having tension headache that bilaterally located last from 30 min not associated with nausea or vomiting were selected

Exclusion criteria:

Subjects with any recent trauma (less than 4 weeks) were excluded Subjects with any malignancy of cervical, upper limb and spine were excluded Subjects with history of epilepsy, panic attacks were excluded Subjects having collar on cervical region were excluded Subjects with vertebrobasilar insufficiency were excluded

Age

From **18 years** old to **40 years** old

Gender

Both

Actual sample size reached: **20**

Randomization (investigator's opinion)

Randomized

Randomization description

Simple random sampling was used to allocate the patients. The list of patients was generated through online randomization generator. According to the list patients were assigned into group 1 and group 2.

Blinding (investigator's opinion)

Single blinded

Blinding description

The participants are blinded in this study

Primary outcomes

1

Description

Pain

Timepoint

Before intervention, after 10 days and 3 weeks of intervention

Method of measurement

Visual analogue used

2

Description

Impact of headache

Timepoint

Before intervention, after 10 days and 3 weeks of intervention

Method of measurement

Headache impact test HTI-6 used

3

Description

Disability

Timepoint

Before intervention, after 10 days and 3 weeks of intervention

Method of measurement

Headache disability index

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group 1: Muscle energy technique, Participants in group 1 received muscle energy technique (Post Isometric Relaxation) 5 reps 3 sets with 10 seconds hold.

Category

Treatment - Other

2

Description

Intervention group 2: soft tissue technique, Group 2 received soft tissue technique (kneading in which skin and soft tissues move in circular pattern, tissues are slowly lifted, rolled and squeezed).
