Effectiveness of METs With and Without Scapular Mobilization in Treating Patients with Adhesive Capsulitis

Protocol summary

Study aim

The study aims to assess the comparative effect of METs and (muscle energy techniques) with and without scapular mobilization in patients with adhesive capsulitis. This study will help to highlight various physiological effects for managing adhesive capsulitis. To study the effect of Muscle Energy Technique on pain in patient with adhesive capsulitis.

Design

Pragmatic, community based, parallel group, double blinded, randomized controlled trial. Total 377 patients will be enrolled. Patients who met our inclusion criteria will be randomized into two groups.

Settings and conduct

Muhammad physical therapy & rehabilitation center
Multan

Participants/Inclusion and exclusion criteria

Inclusion: 1. Age range (e.g 30-60 y) 2. Patients who have completed their conservative treatment for a minimum of 6 Week 3. Patients with pain and Restricted range of motion in the affected shoulder joint 5. Patients who can understand exercise programe 6. Both genders
Exclusion: 1. Patients with any other pathological disease related to the shoulder 2. Patients with neurological and rheumatological disorders 3. Patients with systemic diseases affecting the musculoskeletal system 4. Patients who may be limited in their capacity to exercise due to cardiovascular, respiratory, or metabolic issues 5. Pregnant or breastfeeding ladies 6. Fractures/dislocations 7. History of acute trauma or previous surgery in the affected shoulder 8. Patients treated with corticoid injection in the affected shoulder in the last 12 months (25, 26).

Intervention groups

Group A 188 (who will receive METs with combination of scapular mobilization) and Group B 188 (who will receive METs without scapular mobilization).

Main outcome variables

joint range of motion, joint stiffness, adhesions,

independency and quality of life in adhesive capsulitis patients.

Scientific title
Effectiveness of METs With and Without Scapular Mobilization in Treating Patients with Adhesive Capsulitis

Public title
METs With and Without Scapular Mobilization in Treating Patients with Adhesive Capsulitis.

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Age range (e.g 30-60 y) Patients who have completed their conservative treatment for a minimum of 6 Week Restricted range of motion of the affected shoulder joint Patients with pain (e.g visual analogue score > 4) in the affected shoulder joint Patients who can understand exercise program and co-operate with therapist Both genders
Exclusion criteria:
1. Patients with any other pathological disease related to the shoulder (e. g. "rotator cuff tear, impingement syndrome") Patients with neurological and rheumatological disorders affecting the shoulder joint Patients with a history of shoulder surgery or trauma Patients with systemic diseases affecting the musculoskeletal system (e. g., osteoarthritis, rheumatoid arthritis) Patients who may be limited in their capacity to exercise due to cardiovascular, respiratory, or metabolic issues Patients who are pregnant or breastfeeding Fractures/dislocations⁸. History of acute trauma or previous surgery in the affected shoulder Patients treated with corticoid injection in the affected shoulder in the last 12 months

Age
From **30 years** old to **60 years** old

Gender
Both

Phase
N/A

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size
Target sample size: **377**

Randomization (investigator's opinion)
Randomized

Randomization description
This randomization will be done by Lottery method to ensure fairness. Medications will be given in numbered white boxes, each with a unique medication number. The treatment codes will be kept by the principal investigator.

Blinding (investigator's opinion)
Double blinded

Blinding description
Statistical analyser and outcome assessor will be kept blind so that the result obtained will be without biasness.

Placebo
Not used

Intervention groups

1

Description

Intervention group: will receive METs with combination of scapular mobilization scapular exercises • scapular wall angles• scapular protraction and retraction with Quadruped exercises • scapular dips• scapular punches• scapular cat camel stretch . Muscle Energy Techniques MET for Glenohumeral Joint Restricted Flexion , Abduction and External Rotation, Treatment regime distributed in 12 weeks period, 5 days a week, with 30 repetitions per set and sessions lasting 30 min per day

Category

Rehabilitation

2

Description

Control group: will receive METs without scapular mobilization , MET for Glenohumeral Joint Restricted Flexion MET for Glenohumeral Joint Restricted Abduction MET for Glenohumeral Joint Restricted External Rotation, Treatment regime distributed in 12 weeks period, 5 days a week, with 30 repetitions per set and sessions lasting 30 min per day
