Comparative effects of AI generated vs therapist designed exercise on physical fitness and quality of life among post CABG patients

Protocol summary

Study aim

To evaluate the comparative effects of AI-generated exercise programs versus therapist-designed exercise programs on physical fitness among post-CABG patients.

Design

Two groups, single blind Randomized Clinical Trial, 8 week , 50 participants

Settings and conduct

Post CABG patients from Aziz Bhatti Teaching Hospital Gujrat , accessor is blind

Participants/Inclusion and exclusion criteria

Post CABG patients, Inclusion criteria: both male or females whose age lies between 35-60 and had recent undergone surgery in last 3-6 months and cleared by Cleared by their cardiologist to participate in structures exercise program Exclusion criteria: pregnant females or patients with severe musculoskeletal conditions which can affect their exercise or patients with acute systemic illness or fever will be not include in this study.

Intervention groups

Group A- (AI generated exercise plan) Group B- (Cardiopulmonary therapist designed plan) For group A Artificial intelligence (CHAT-GPT) tool will be used for exercise plan whereas for Group 2 Cardiopulmonary therapist will designed the plan of protocol. 8th weeks session will be taken , different weeks have different protocols with different frequencies, durations and intensities. Individuals' physical fitness levels were evaluated using the Senior Fitness Test protocol, and their quality of life was evaluated using the Short Form-36.

Main outcome variables

Quality of life , Physical fitness

Health conditions studied

1

Description of health condition studied

Post CABG patients

ICD-10 code

Z95.1

ICD-10 code description

Presence of Coronary Artery Bypass Grafting

Primary outcomes

1

Description

Quality of life

Timepoint

Before intervention and after intervention - 2 times

Method of measurement

Quality of life sf-36 questionnaire

Secondary outcomes

1

Description

Physical fitness

Timepoint

Before and after intervention 2 readings

Method of measurement

Senior fitness test

Intervention groups

1

Description

Intervention group: Group A- (AI generated exercise plan) For group A Artificial intelligence (CHAT-GPT) tool will be used for exercise plan . 8th weeks session will be taken, first reading will be assessed physically Before and after exercise training, warm-up and cool-down activities. All weeks have different protocols with different duration, intensity and duration

Category

Rehabilitation

2

Description

Group B- (Cardiopulmonary therapist designed plan) Group 2 Cardiopulmonary therapist will designed the plan of protocol. 8th weeks session will be taken, first reading will be assessed physically Before and after exercise training, warm-up and cool-down activities. All weeks have different protocols with different duration, intensity and duration

Title and more details about the data/document

Comparative effects of AI generated vs therapist designed exercise on physical fitness and quality of life among post CABG patients

When the data will become available and for how long

Right after publication

To whom data/document is available

All academic or working institutions

Under which criteria data/document could be used

For rehabilitation and to improve quality of life and physical fitness

From where data/document is obtainable

Post cabg patients

What processes are involved for a request to access data/document

Data will be entered and analyzed by SPSS version 25. Statistical significance will be at $p= 0.05$.
