Iranian Registry of Clinical Trials

10 Jun 2026

The effect of education-based cognitive-behavioral approach on beliefs, behaviors, and symptoms of hot flashes and insomnia among menopausal transition women: A randomized controlled trial

Protocol summary

Severity and frequency of hot flashes, hot flash beliefs, hot flash behaviors, the severity of insomnia.

Study aim

The effect of education-based cognitive-behavioral approach on beliefs, behaviors, and symptoms of hot flashes and insomnia among menopausal transition women

Design

A randomized controlled clinical trial with parallel groups, involving 64 patients in each group. Participants will be allocated to the intervention and control groups using random block assignments of 2 and 4.

Settings and conduct

Eligible women are randomly assigned to intervention or control groups. Before the intervention, all complete symptom and characteristic questionnaires. Intervention group: Attends six 2-hour sessions over 6 weeks at Shahid Fayazbakhsh Gonabad Health Center, covering psychoeducation, stress management, breathing techniques, and cognitive distortions. Control group: Receives only an educational booklet on menopause. After the intervention, both groups retake the questionnaires to assess changes.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Age 45-55, Natural menopause, Hot flashes/night sweats (score more than 2) for 1 month, Insomnia for 1 month. Exclusion criteria: Medications affecting hot flashes, Medical/psychological conditions preventing participation, Special diet/supplements affecting menopause, Breast cancer (less than 6 months post-treatment).

Intervention groups

In the intervention group, participants will attend 2-hour weekly sessions for 6 weeks (total 12 hours). Sessions will focus on cognitive-behavioral techniques, stress management, and recognizing cognitive distortions. The control group will receive an educational booklet on menopause and symptom management.

Scientific title
The effect of education-based cognitive-behavioral approach on beliefs, behaviors, and symptoms of hot flashes and insomnia among menopausal transition women: A randomized controlled trial

Public title
The effect of education-based cognitive-behavioral approach on beliefs, behaviors, and symptoms of hot flashes and insomnia among women

Purpose
Education/Guidance

Inclusion/Exclusion criteria
Inclusion criteria:
Completion of the Informed Consent Form Iranian and a resident of Gonabad city Ability to read and write Menopause transition years (45 to 55 years) In the event of menopause, the menopause must have occurred naturally (not due to surgery) Having hot flashes/night sweats (a score above 2 on the hot flash rating scale) for at least 1 month Having insomnia for at least 1 month
Exclusion criteria:
Use of effective medications for hot flashes (Estrogen and Progesterone, SSRIs, and SNRIs, Antihypertensive and Anticonvulsant drugs) Presence of medical or psychological conditions that prevent participation in the study Occurrence of a stressful event in the past six months (as reported by the participant) Specific diet and soy supplements consumption or other plant-based compounds affecting menopausal symptoms, including isoflavone consumption (as reported by the participant) Breast cancer (provided that less than six months have passed since the end of treatment) Presence of medical conditions that may affect hot flashes (as reported by the participant) Use of prescription or over-the-counter treatments for hot flashes in the past 30 days (as reported by the participant) Use of sex steroid hormones or hormonal contraceptives drugs (within the past 2 months) (as reported by the participant) History of treatment or training based on cognitive behavioral therapy

Age
From **45 years** old to **55 years** old

Gender
Female

Health conditions studied

1

Description of health condition studied
Menopause, Hot Flash, Insomnia
ICD-10 code
N95.1
ICD-10 code description
Menopausal and female climacteric states

Primary outcomes

1

Description
Hot flash severity on the Hot Flash Frequency And Problem Rating Scale
Timepoint
Measuring the severity of hot flashes at the beginning of the intervention (before the start of the intervention), immediately after completion of the intervention, and one month after completion of the intervention
Method of measurement
Hot Flash Frequency And Problem Rating Scale

2

Description

Hot flash frequency on the Hot Flash Frequency And Problem Rating Scale

Timepoint

Measuring the severity of hot flashes at the beginning of the intervention (before the start of the intervention), immediately after completion of the intervention, and one month after completion of the intervention

Method of measurement

Hot Flash Frequency And Problem Rating Scale

3

Description

insomnia severity on the Insomnia Severity Index

Timepoint

Measuring the severity of hot flashes at the beginning of the intervention (before the start of the intervention), immediately after completion of the intervention, and one month after completion of the intervention

Method of measurement

Insomnia Severity Index

4

Description

Night sweats score on Hot Flash Frequency And Problem Rating Scale

Timepoint

Measuring the severity of hot flashes at the beginning of the intervention (before the start of the intervention), immediately after completion of the intervention, and one month after completion of the intervention

Method of measurement

Hot Flash Frequency And Problem Rating Scale

5

Description

Hot Flash Behavior score on the Hot Flush Behavior Scale

Timepoint

Measuring the severity of hot flashes at the beginning of the intervention (before the start of the intervention), immediately after completion of the intervention, and one month after completion of the intervention

Method of measurement

Hot Flush Behavior Scale

6

Description

Hot Flash Beliefs Score on the Hot Flash Beliefs Scale

Timepoint

Measuring the severity of hot flashes at the beginning of the intervention (before the start of the intervention), immediately after completion of the intervention, and one month after completion of the intervention

Method of measurement

Hot Flash Beliefs Scale

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Two-hour training sessions, once a week, for six weeks. A cognitive-behavioral approach will be used to structure the content of the sessions, focusing on psychoeducation, stress management, proper breathing, training and identification of cognitive errors, and other items related to the cognitive-behavioral approach, including setting individual goals and assigning homework. The training sessions will use lectures with slides and clips on the topic of relaxed/rapid breathing, and educational pamphlets.

Category

Behavior

2

Description

Control group: Participants will receive an educational booklet about menopause, its symptoms, and strategies for reducing vasomotor symptoms.
