Comparative effects of Mikhled and Mckenzie Knee Exercise on Pain, Range of Motion and Function in Football players with Patellofemoral Pain Syndrome

Protocol summary

Study aim

To determine the effects of Mikhled vs. McKenzie Knee Exercise on Pain, range of motion and functional status in Football players with Patellofemoral Pain Syndrome

Design

The study design will be Randomized Clinical Trial with sample size of 56. It will be non probability convenient sampling and participants will randomized through sealed envelope method into two groups.

Settings and conduct

The study will be conducted at Farhan Physio and Rehab Clinic Peshawar Pakistan and our study duration will be 12 months.

Participants/Inclusion and exclusion criteria

Inclusion Criteria: • Regular Football Players • Age: 18 to 35 years. • Diagnosed cases of Patellofemoral pain syndrome • Willing to Participate on study Exclusion Criteria: • History of knee surgery in past 6 months. • Having other knee pathologies (ACL tear, meniscal Injury). • Inability to participate in study due to other medical condition

Intervention groups

There will be 2 groups Group A and Group B. Group A will be given Mikhled Exercises. The MKEP technique includes seven therapeutic level postures that should be held for 15-20 minutes each: Level one is supine, level two is on elbows, level three is half sitting, level four is prone, level five is bench long sitting, level six is bench prone, and level seven is bench supine. Our frequency will 3 session per week for 4 weeks and duration will be 45 mint. Group B will be given Mckinze Exercise. 1. Knee Extension Exercises includes Straight Leg Raise (SLR) and Heel Slides 2. Knee Flexion Exercises includes Prone Knee Flexion and Seated Knee Flexion exercises 3. Strength Exercises which includes quadriceps sets Our frequency will 3 session per week for 4 weeks. Duration of 1 session will be 45 mints

Main outcome variables

Data collection tools for Pain, Range of Motion and Functional status will be include: Numeric Pain Rating Scale, Goniometry and Kujala Scoring Questionnaires

Randomization (investigator's opinion)

Randomized

Randomization description

Participants will be randomized into 2 groups through sealed envelope method ensuring allocation concealment and minimizing bias. It will involve creating a series of numbered envelopes, each containing the treatment assignment for specific patients, and then assigning the envelope to patient upon consent. Group A will be given Mikhled Knee exercises and Group B will be given Mckenzie knee exercises.

Blinding (investigator's opinion)

Single blinded

Blinding description

Blinding in this study involve making participants are uninformed which participant which will be in which treatment group and which treatment will be given to which participant through sealed envelope method so it will be a single blinded study.

Intervention groups**1****Description**

Intervention group: A Mikhled Knee Exercises, MKEP technique includes seven therapeutic level postures that should be held for 15-20 minutes each: Level one is supine, level two is on elbows, level three is half sitting, level four is prone, level five is bench long sitting, level six is bench prone, and level seven is bench supine. The same activity is included in each level but is presented differently as follows: The patient was taught to dorsiflex

and to straighten the knee joint. The patient was instructed to elevate one leg 15 inches above the ground while keeping the knee extended. The patient was instructed to stretch his or her leg outward in an abduction stance while maintaining a straight knee. The patient was instructed to keep one leg outside of the body and bend it for 30 degrees. The patient was instructed to straighten his or her knee while maintaining horizontal leg position. The patient was instructed to position his leg inside in a manner similar to a second step, and then to return to step one and take a 30-second rest. Our frequency will 3 session per week for 4 weeks. Duration of 1 session will be 45 mints.

Description

Intervention group: B Mckenzie Knee Exercises which include Straight Leg Raise (SLR):• Lie on your back with your legs straight. • Lift your affected leg off the ground, keeping it straight. • Hold for a few seconds and then lower it back down. • Repeat 10-15 times. Heel Slides:• Lie on your back with your knees bent. • Slide your affected heel towards your buttocks. • Slide it back to the starting position. • Repeat 10-15 times. 2. Knee Flexion Exercises: Prone Knee Flexion:• Lie on your stomach with your legs straight. • Bend your affected knee, bringing your heel towards your buttocks. • Hold for a few seconds and then straighten your leg. • Repeat 10-15 times. Seated Knee Flexion:• Sit on a chair with your feet flat on the floor. • Bend your affected knee, lifting your foot off the ground. • Hold for a few seconds and then lower your foot back down. • Repeat 10-15 times. 3. Strength Exercises: Quadriceps Sets:• Sit or lie down with your legs straight. • Tighten your thigh muscles (quadriceps) and hold for 10 seconds. • Relax and repeat 10-15 times 3 session per week for 4 weeks. Duration of 1 session will be 45 mints.
