The effect of two common corrective and scapular-focused training approaches on shoulder strength, range of motion, proprioception, shoulder girdle function, and scapulohumeral rhythm in female athletes with scapular dyskinesis

Protocol summary

Study aim

to compare the effects of two common corrective exercises and scapular-focused approaches on the strength, range of motion, and proprioception of the shoulder joint, shoulder girdle function, and scapulo-humeral rhythm in female athletes who are suffering from scapular dyskinesis.

Design

The present study has three groups: Intervention group 1: common corrective exercises. Intervention group 2: scapular-focused exercises, and control group: no exercise. This study is a randomized controlled trial with a control group, with parallel groups and with a sample size of 36 people.

Settings and conduct

The first stage was the selection of subjects based on the inclusion criteria; the second stage was random grouping with blinding of subjects; the third stage was the pre-test; the fourth stage was two months of training; the fifth stage was the post-test. The testing and training locations were the laboratory of the Faculty of Physical Education, Shahid Bahonar University, Kerman, and the Palladium Club and Ardeshir Hemmati Club in Kerman, respectively.

Participants/Inclusion and exclusion criteria

Inclusion criteria People with scapular dyskinesis confirmed by the McClure test exclusion criteria Acute injury to the scapula and shoulder, including fractures and dislocations A history of injury to the aforementioned area in the past six months A history of shoulder surgery Receiving any type of rehabilitation and exercise therapy in the past six months Having pain greater than 3 on the VAS scale

Intervention groups

Experimental group 1: common corrective exercises, Experimental group 2: scapular-focused exercises, and

Control group: No exercise.

Main outcome variables

Shoulder joint strength; shoulder joint range of motion; shoulder joint proprioception; shoulder girdle function and scapulo-humeral rhythm

Scientific title
 The effect of two common corrective and scapular-focused training approaches on shoulder strength, range of motion, proprioception, shoulder girdle function, and scapulohumeral rhythm in female athletes with scapular dyskinesis

Public title
 The effect of two common corrective and scapular-focused training approaches in athletes with scapular dyskinesis

Purpose
 Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
 Individuals with scapular dyskinesia confirmed by the Mc Clure test Female gender Age 13 to 20 years Playing volleyball or basketball at least three times a week Having skills at the junior league level
Exclusion criteria:
 Acute injury to the scapula and shoulder, including fractures and dislocations, because it prevented exercise History of injury to the mentioned area in the past six months History of shoulder surgery Receiving any type of rehabilitation and exercise therapy in the past six months Having pain greater than 3 on the VAS scale

Age
 From **13 years** old to **20 years** old

Gender
 Female

Phase

Sample size
 Target sample size: **45**
 Actual sample size reached: **36**

Randomization (investigator's opinion)
 Randomized

Randomization description
 The researcher randomly assigns the subjects to one of three study groups, including the corrective exercise program, the scapular-focused program, and the control group, using the website (<https://www.randomizer.org>). On this website, the researcher must complete the relevant information and then click the calculate button. Questions and answers include: How many sets of numbers do you want to generate? 3. How many numbers per set? 12. Number range: 1-36. Do you wish each number in a set to remain unique? Yes. Do you wish to sort the numbers that are generated? No. The result of the calculation will be 3 sets of 12 unique numbers in

each set.

Health conditions studied

1

Description of health condition studied

Scapular dyskinesis

ICD-10 code

M25.819

ICD-10 code description

Other specified joint disorders, unspecified shoulder

Primary outcomes

1

Description

Shoulder joint strength

Timepoint

Measuring the strength variable in the pre-test and measuring it again after the training period in the post-test.

Method of measurement

Using a hand-held dynamometer in internal and external shoulder rotation movements

2

Description

Shoulder joint range of motion

Timepoint

Measuring the range of motion variable in the pre-test and measuring it again after the training period in the post-test.

Method of measurement

Using a universal goniometer in internal and external shoulder rotation movements

3

Description

Shoulder joint proprioception

Timepoint

Measuring the proprioception variable in the pre-test and measuring it again after the training period in the post-test.

Method of measurement

Using a digital inclinometer to measure the error rate of reconstructing the 90-degree abduction angle

4

Description

Upper limb function

Timepoint

Measuring the Upper limb function variable in the pre-test and measuring it again after the training period in the post-test.

Method of measurement

By CKCUEST test

5

Description

Scapulo-humeral rhythm

Timepoint

Measuring the Scapulo-humeral rhythm variable in the pre-test and measuring it again after the training period in the post-test.

Method of measurement

By two digital inclinometers

Secondary outcomes

empty

Intervention groups

1

Description

First intervention group: The group receiving common corrective exercises to correct scapular dyskinesis. This group performed neuromuscular and strengthening exercises targeting the scapula area for 8 weeks, 3 days a week, in a gym under the direct supervision of the researcher, following the protocol outlined by Hotta et al. (2018).

Category

Rehabilitation

2

Description

Second intervention group: The group receiving scapular-focused exercises to correct shoulder dyskinesis. This group performed shoulder-stretching and strengthening exercises for 6 weeks at home every day under the indirect supervision of the researcher, according to the protocol of Tang et al. (2024).

Category

Rehabilitation

3

Description

Control group: The group with no training.

Title and more details about the data/document

With permission from the supervisor and coordination with the specialized department of sport pathology and biomechanics of Shahid Bahonar University of Kerman, all information can be shared after being de-identified.

When the data will become available and for how long

After publishing the article/articles extracted from the study

To whom data/document is available

The data can be displayed and shared upon reasonable and formal request by the Iranian Clinical Trial Registry Center, journals, and individuals/academic researchers who are conducting research and scientific activities in this field.

Under which criteria data/document could be used

Data analysis and use of documentation can only be done on the condition that their results are reported in scientific articles conducted by academic researchers and authors. The requirements for sending data and

documentation include: 1. Sending an email (preferably with a valid academic address) to one of the study researchers 2. A brief and logical explanation regarding how the data or documentation will be used.

From where data/document is obtainable

By request from researcher Zahra Mahdavi Jafari
zahra.mahdavi.jafari@sport.uk.ac.ir

What processes are involved for a request to access data/document

The applicant can receive the necessary information by contacting researcher Zahra Mahdavi Jafari and coordinating with the specialized department of Sports Pathology and Biomechanics at Shahid Bahonar University of Kerman.
