## Iranian Registry of Clinical Trials

10 Jun 2026

### Comparison of the Effectiveness of Neurofeedback and Yoga on Enhancing Concentration, Attention, and Reducing Anxiety in Children Aged 6 to 11 with Attention-Deficit/Hyperactivity Disorder (ADHD)

#### Protocol summary

##### Study aim

Determining the Comparative Effectiveness of Neurofeedback and Yoga on Enhancing Concentration, Attention, and Reducing Anxiety in Children Aged 6 to 11 with Attention-Deficit/Hyperactivity Disorder (ADHD) in Ahvaz.

##### Design

A clinical trial with an intervention group and a control group, with parallel groups, unblinded, randomized, with pre-test and post-test, on 50 people, Drawing lots will be used for randomization.

##### Settings and conduct

The study was conducted at a girls' elementary school in Ahvaz. The study population consisted of 50 participants. In this study, blinding was not performed.

##### Participants/Inclusion and exclusion criteria

Inclusion Criteria: Having a confirmed diagnosis of Attention-Deficit/Hyperactivity Disorder (ADHD) by the school counselor, as well as through ADHD questionnaires. Children aged between 6 and 11 years. Having an Intelligence Quotient (IQ) within the normal range (typically 90-110 or higher), as measured by the Wechsler Intelligence Scale for Children (WISC-IV).  
Exclusion Criteria: Presence of severe comorbid psychiatric disorders or serious comorbid conditions such as psychotic disorders, severe major depressive disorder, bipolar disorder, or autism spectrum disorders. Presence of neurophysiological disorders such as a history of epilepsy, seizures, severe head trauma, or any known neurological condition that may affect brain function and EEG. Regular participation in other psychotherapy sessions (e.g., play therapy, art therapy) or any other interventions that directly affect attention and anxiety during the study period.

##### Intervention groups

The intervention group receives cognitive behavioral therapy. The control group receives no intervention.

#### Main outcome variables

Anxiety in Children, Attention-Deficit/Hyperactivity Disorder (ADHD)

**Scientific title**

Comparison of the Effectiveness of Neurofeedback and Yoga on Enhancing Concentration, Attention, and Reducing Anxiety in Children Aged 6 to 11 with Attention-Deficit/Hyperactivity Disorder (ADHD)

**Public title**

Comparison of the Effectiveness of Neurofeedback and Yoga on Enhancing Concentration, Attention, and Reducing Anxiety in Children Aged 6 to 11 with Attention-Deficit/Hyperactivity Disorder (ADHD)

**Purpose**

Education/Guidance

**Inclusion/Exclusion criteria****Inclusion criteria:**

Having a confirmed diagnosis of Attention-Deficit/Hyperactivity Disorder (ADHD) by the school counselor as well as through ADHD questionnaires. The child's age should be between 6 and 11 years (completed). Having an Intelligence Quotient (IQ) within the normal range (typically 90-110 or higher), as measured by the Wechsler Intelligence Scale for Children (WISC-IV). No use of psychiatric medications during the past three months. Obtaining written informed consent from the child's parents for participation in the study.

**Exclusion criteria:**

Presence of severe comorbid psychiatric disorders or serious comorbid conditions such as psychotic disorders, severe major depressive disorder, bipolar disorder, or autism spectrum disorders. Presence of neurophysiological disorders such as a history of epilepsy, seizures, severe head trauma, or any known neurological condition that may affect brain function and EEG. Regular participation of the child in other psychotherapy sessions (such as play therapy, art therapy) or any other interventions that directly affect attention and anxiety during the study period. Presence of severe sensory (blindness, deafness) or motor impairments that make participation in yoga sessions or sitting still during neurofeedback sessions impossible. Lack of willingness of the child or family to consistently comply with the research protocol (regular attendance at sessions, completing questionnaires) or their request to withdraw from the study at any stage.

**Age**

From **6 years** old to **11 years** old

**Gender**

**Phase**

N/A

**Groups that have been masked**

*No information*

**Sample size**

Target sample size: **50**

**Randomization (investigator's opinion)**

Randomized

**Randomization description**

A simple randomization method will be used. According to this method, the names of all selected participants will be written on pieces of paper and placed in a box for a lottery draw. Then, the pieces of paper will be drawn one by one, with the first 25 participants (1-25) assigned to the experimental group and the next 25 participants (26-50) drawn from the box assigned to the control group.

**Secondary outcomes**

empty

**Intervention groups**

**1**

**Description**

Intervention group: The intervention group will participate in a 24-session training program, each session lasting 60 minutes (30 minutes of neurofeedback + 30 minutes of yoga), conducted three times per week. 1. Sessions 1-3: Introduction and Initial AssessmentGoal: Reduce initial anxiety, familiarize children with the treatment process, and enhance

motivation.Content:Neurofeedback: Baseline EEG assessment, introduction to the device, and simple games.Yoga: Introduction to yoga in child-friendly language, practice of abdominal breathing, and simple stretches.Homework: Daily 3-minute abdominal breathing exercise with parents. 2. Sessions 4-6: Beginning Basic TrainingGoal: Strengthen sustained attention and increase body awareness.Content:Neurofeedback: Implementation of SMR protocol (12-15 Hz), simple visual games.Yoga: Cat-cow, tree pose, and basic arm-leg stretches combined with calm breathing.Homework: Daily practice of the tree pose or a simple stretch at home. 3. Sessions 7-9: Stabilization and RelaxationGoal: Improve mental and physical self-regulation.Content:Neurofeedback: Continuation of SMR training with calm breathing before each session.Yoga: Focus on breathing and simple seated-standing movements.Homework: Daily 5-minute calm breathing practice with parents. 4. Sessions 10-12: Enhancing Selective AttentionGoal: Improve processing

speed and focus on specific stimuli.Content:Neurofeedback: Introduction of low beta protocol (15-18 Hz), intermediate-level games.Yoga: Animal poses (frog, snake, bird) combined with storytelling.Homework: Practice one animal yoga pose at home and perform it for parents. 5. Sessions 13-15: Strengthening Sustained AttentionGoal: Enhance accuracy and mind-body control.Content:Neurofeedback: Combined SMR + beta protocol, more engaging games.Yoga: Balance exercises (tree pose, warrior, standing on one foot).Homework: Daily one-leg balance for 20 seconds. 6. Sessions 16-18: Training in Simulated ConditionsGoal: Generalize learned skills to real-life situations.Content:Neurofeedback: Practice with distracting stimuli (additional sounds or images).Yoga: Guided relaxation (simple body scan, lying down, and breathing).Homework: Relaxation practice before bedtime (lying down and calm breathing). 7. Sessions 19-21: Review and IntegrationGoal: Automate attention and integrate mind-body skills.Content:Neurofeedback: Advanced-level games, focusing under more difficult conditions.Yoga: Integration of breathing, stretches, animal poses, and balance exercises.Homework: Short yoga session at home (5 minutes breathing + 2 simple poses). 8. Sessions 22-24: Final ConsolidationGoal: Consolidate achievements and transfer skills into daily life.Content:Neurofeedback: Final review and training, reassessment of changes.Yoga: Review of learned movements, final playful yoga session.Homework: Continue daily practice (5 minutes breathing + one focus activity or yoga pose).
