The effectiveness of mindfulness training based on stress reduction on quality of life and mental well-being in students with generalized anxiety disorder

Protocol summary

Mental well-being, quality of life

Study aim

The main aim of this study is to determine the effectiveness of mindfulness training based on stress reduction on quality of life and mental well-being in students with generalized anxiety disorder.

Design

Clinical trial with control group with parallel groups, no blinding. Non-random assignment to intervention and control groups with a sample size of 40 people.

Settings and conduct

The MBSR training sessions will be held at the Islamic Azad University, Tonekabon Branch. This training will be an eight-week course, with one session per week, and the duration of each session will be 30 to 45 minutes. The fixed order of each session will include reviewing the homework assignments from the previous session, feedback on resolving existing questions and problems, teaching the intended materials and techniques, meditation skills, discussing stress and coping methods, and assigning homework.

Participants/Inclusion and exclusion criteria

Entry criteria: All individuals who are currently studying in the nursing field at the Islamic Azad University, Tonekabon Branch, at the undergraduate level. Those who achieve the quorum score on the Spitzer et al. Generalized Anxiety Disorder Test. Written consent to participate in the study. Exclusion criteria: No psychiatric medication in the past 6 months until the time of the study No psychotherapy in the past 6 months until the time of the study No consent to participate in the study

Intervention groups

The intervention group consists of students with generalized anxiety disorder who receive a mindfulness-based stress reduction intervention. The comparison group consists of students with generalized anxiety disorder who receive no intervention.

Description of health condition studied

Generalized anxiety disorder

ICD-10 code

F41.1

ICD-10 code description

Generalized anxiety disorder

Primary outcomes

1

Description

Anxiety score on the Spitzer et al. Generalized Anxiety Disorder Questionnaire

Timepoint

Anxiety score was measured using the Spitzer et al. Generalized Anxiety Disorder Questionnaire at the beginning of the study and before the start of the mindfulness-based stress reduction intervention.

Method of measurement

Spitzer et al. General Anxiety Inventory

Secondary outcomes

1

Description

Quality of life score

Timepoint

At the beginning and before the intervention begins and at the end after the intervention ends

Method of measurement

Short Form Quality of Life Questionnaire 36-question, SF-36

2

Description

Mental well-being score

Timepoint

At the beginning and before the intervention begins and at the end after the intervention ends

Method of measurement

Keyes and Magyarmo's Subjective Well-Being Questionnaire(sws)

Intervention groups

1

Description

Mindfulness-based stress reduction is a group program developed by Jon Kabat-Zinn in the 1970s to treat patients struggling with life problems and physical or mental illnesses. Mindfulness-based stress reduction is an 8-week training program that uses formal and informal mindfulness exercises. The standard order of each session will include a review of homework from the previous session, feedback on resolving existing questions and problems, teaching the intended content and techniques, meditation skills, discussing stress and coping methods, and assigning homework. The content presented during the 8 sessions will include the following: introduction to mindfulness training, training and doing exercises related to the state of mindfulness exercises, practicing paying attention to breathing, doing body scan exercises, doing sitting meditation, doing yoga movements, practicing mindful eating, practicing mindful walking meditation, and creating a personal mindfulness plan. Participants are asked to do mindfulness exercises for 45 minutes daily as homework. Number of treatment sessions: 8 sessions, 30 to 60 minutes, once a week, treatment is done individually.

Title and more details about the data/document

Results, tables and treatment protocol

When the data will become available and for how long

6 months after results are published

To whom data/document is available

Applicants from qualified individuals (general practitioners, medical specialists, psychiatrists, psychologists)

Under which criteria data/document could be used

The use of the documentation of this trial will only be possible for academic and scientific researchers on a limited basis and with permission from the person responsible for this trial.

From where data/document is obtainable

Correspondence via email address

mobina.sadeghifarr@gmail.com

What processes are involved for a request to access data/document

Any request for access to data or documentation from this study must be made by sending a formal written request to the principal investigator or supervisor. This request must include the applicant's details, the purpose of using the data, the type of data required, and how to ensure the confidentiality of the information. After receiving the request, the following will be reviewed: Verification of the applicant's scientific identity and organizational affiliation Evaluation of the research purpose and its alignment with the ethical principles of the study Final approval by the principal investigator and, if necessary, the university ethics committee If approved, the data will be provided to the applicant in an anonymized and limited to the requested items, in a scientifically usable format. Use of the data is permitted only with acknowledgement of the source and observance of the confidentiality of the participants' information.
