

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Preparation and Clinical evaluation of the combined solution of minoxidil, azelaic acid and spironolactone in the treatment of androgenic alopecia

Protocol summary

Registration timing: **prospective**

Study aim

The aim of the present study was to formulate a topical solution of minoxidil, spironolactone, and azelaic acid and its clinical evaluation in androgenic alopecia.

Last update: **2025-10-18, 1404/07/26**

Settings and conduct

The present study is a two-group clinical trial that will be conducted in Hamedan city in 1404 with the participation of 50 patients with androgenic alopecia. Patients will be randomly divided into two groups (an intervention group and a control group). Intervention group: They will receive a solution containing minoxidil 5%, spironolactone 5%, and azelaic acid 1.5% twice daily for three months. Control group: The patients use a solution containing minoxidil 5% in two sessions for three months.

Recruitment status

Recruitment complete

Funding source

Participants/Inclusion and exclusion criteria

Age group older than 18 years and diagnosis of androgenetic alopecia and severity of the disease and the individual by dermatologists and hair specialists, as well as the absence of other diseases

Expected recruitment start date

2025-10-22, 1404/07/30

Expected recruitment end date

2026-04-20, 1405/01/31

Intervention groups

Intervention group: They will receive a solution containing minoxidil 5%, spironolactone 5%, and azelaic acid 1.5% twice daily for three months. Control group: The patients use a solution containing minoxidil 5% in two sessions for three months.

Preparation and Clinical evaluation of the combined solution of minoxidil, azelaic acid and spironolactone in

the treatment of androgenic alopecia

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Diagnosis of androgenetic alopecia and its severity
Informed consent of the patient
No specific underlying diseases
Absence of other skin diseases

Exclusion criteria:

Sensitivity to soluble components
Diabetic patients with heart failure
Pregnancy during the study
Side effects that are not tolerated by the patient
Immune deficiency
Malignant diseases

Age

From **18 years** old

Gender

Both

Phase

3

- Participant
- Care provider

Sample size

Target sample size: **50**

Randomization (investigator's opinion)

Randomized

Randomization description

Random assignment of the patients to the intervention and control groups through the drawing of lots. To do this, we prepare two sheets and write "intervention" on one sheet and "control" on another. Then, by referring each patient, one of the sheets will be randomly taken and the patient will be assigned to the intervention or control group.

Blinding (investigator's opinion)

Double blinded

Blinding description

The shape of the medications will be perfectly the same in the two groups. Therefore, patients will be unaware of the type of intervention. The physician who will examine the patients will not be aware of the intervention. Therefore, the trial will be run as double-blind.
