Investigating the effect of aerobic exercises, yoga, and spirituality on the participation of the elderly in physical activity and sports

Protocol summary

Study aim

The purpose of this study is to investigate the effect of aerobic exercises, yoga, and spirituality on the participation of the elderly in physical activity and sports.

Design

This study is a randomized and not-blinded trial with a parallel-group design, including 120 older adults over 60 years old.

Settings and conduct

Older adults over 60 years who are living in Tehran's community-dwelling centers during the study will be included in the study if they are eligible and will be randomly assigned to the intervention and control groups by lottery. This study will be conducted in an "not blinded" manner in which the purpose of the research will be explained to the instructors, participants, and the analyst.

Participants/Inclusion and exclusion criteria

Inclusion criteria were men and women over 60 years old, without cognitive impairment, and without physical disability. Exclusion criteria included participation in aerobics, yoga, or spirituality classes in the past six months, and any changes in the participant's general health during exercise that would prevent them from continuing exercise.

Intervention groups

The intervention program for Group 1 consisted of eight weeks of aerobic exercises, including brisk walking, jogging, and running. Group 2 participated in an eight-week yoga program, including stretching exercises, meditation, and mindfulness practices. Group 3 underwent an eight-week spirituality program, including prayer, meaning-making activities, and self-awareness exercises. The control group continued their usual daily activities at the residential care facility, such as routine social and cultural programs, and did not receive any intervention.

Main outcome variables

Intention to participate in physical activity and exercise,

depression, anxiety

Sample size

Target sample size: **120**

Randomization (investigator's opinion)

Randomized

Randomization description

Simple randomization was performed based on the inclusion and exclusion criteria. Assignment to the intervention and control groups was done by drawing lots. The labels "Aerobics," "Yoga," "Spirituality," and "Control (no exercise)" were written on separate slips of paper, placed in a container in quantities corresponding to the number of participants, and then participants were assigned to their respective groups according to the list.

Intervention groups

1

Description

Intervention Group 1 will participate in a group aerobic exercise program for eight weeks, with three sessions per week, each lasting 30–50 minutes. Each session will consist of three parts: warm-up, main exercise, and cool-down. During the warm-up, participants will walk at a normal pace and perform stretching and flexibility exercises to prepare the body and reduce the risk of injury. The main exercise will consist of brisk walking, jogging, and running, aiming to improve cardiovascular endurance, enhance overall physical fitness, and strengthen muscles. Participants will be guided by a trained instructor, who will ensure correct technique and provide support to maximize both safety and effectiveness. The cool-down will include walking at a slower pace and additional stretching and flexibility exercises to relax muscles, prevent stiffness, and facilitate recovery. Participants will be encouraged to actively engage in all exercises, reflect on their experiences, and gradually integrate these activities into their daily routines, with the goal of progressively improving physical fitness and comfort with aerobic exercise over the eight-week program.

2

Description

Intervention Group 2 will participate in a group yoga program for eight weeks, with three sessions per week, each lasting 30–50 minutes. Each session will consist of three parts: warm-up, main exercise, and cool-down. The warm-up will include stretching and flexibility exercises to prepare the body and reduce the risk of injury. The main exercise will consist of yoga breathing exercises, meditation, and mindfulness practices, focusing on breath control, body awareness, and mental relaxation. Participants will be guided step-by-step by a trained instructor to ensure correct technique and active engagement. The cool-down will include additional stretching and flexibility exercises to promote relaxation and recovery. Participants will be encouraged to actively engage in all exercises, reflect on their experiences, and discuss insights with the group, with the goal of gradually improving physical flexibility and mental focus over the eight-week program.

Lifestyle

3

Description

Intervention Group 3 will participate in a group spirituality program for eight weeks, with three sessions per week, each lasting approximately 30 minutes. Each session will include structured training and practice in prayer, gratitude exercises, and self-awareness activities. During the prayer component, participants will

learn short prayers and focus on positive words and feelings. In the gratitude component, they will write or share three things they are grateful for and discuss with the group how this affects their emotions. In the self-awareness component, participants will practice mindful breathing, observe their thoughts and feelings, and reflect on personal experiences. Sessions will be guided by a trained facilitator who will provide step-by-step instructions. Participants will be encouraged to actively engage in the exercises, reflect on their experiences, and discuss insights with the group, with the aim of progressively enhancing their skills and comfort with the practices over the eight-week program.
