Comparison of the Effectiveness of Triamcinolone Plus Normal Saline Nasal Irrigation versus Budesonide Plus Normal Saline Nasal Irrigation on Clinical Outcomes and Quality of Life in Patients with Chronic Rhinosinusitis with Nasal Polyps after Endoscopic Sinus Surgery

Protocol summary

Study aim

To compare the effectiveness of nasal irrigation with triamcinolone plus normal saline versus budesonide nasal spray plus normal saline in reducing postoperative complications in patients with chronic rhinosinusitis with nasal polyps after endoscopic sinus surgery.

Design

A randomized, double blind, parallel group clinical trial including 84 patients. Participants will be allocated using permuted block randomization

Settings and conduct

The study will be conducted at Ayatollah Khansari Hospital and Imam Reza Clinic in Arak, Iran. After surgery, participants will be randomly assigned to one of two groups. Patients, outcome assessors, and data analysts will remain blinded to treatment allocation

Participants/Inclusion and exclusion criteria

Patients with chronic rhinosinusitis with nasal polyps undergoing endoscopic sinus surgery. Inclusion criteria: confirmed diagnosis based on clinical findings and computed tomography scan, written informed consent. Exclusion criteria: anatomical sinus abnormalities or unwillingness to continue participation

Intervention groups

Group one receives budesonide nasal spray plus normal saline irrigation. Group two receives nasal irrigation with triamcinolone mixed with normal saline

Main outcome variables

Sino Nasal Outcome Test 22 score; Lund Kennedy endoscopic score; Lund Mackay computed tomography score.

Scientific title

Comparison of the Effectiveness of Triamcinolone Plus

Normal Saline Nasal Irrigation versus Budesonide Plus Normal Saline Nasal Irrigation on Clinical Outcomes and Quality of Life in Patients with Chronic Rhinosinusitis with Nasal Polyps after Endoscopic Sinus Surgery

Public title

Comparison of Triamcinolone and Budesonide Nasal Irrigation after Endoscopic Sinus Surgery in Patients with Chronic Rhinosinusitis with Nasal Polyps

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Age 18 years or older
Diagnosis of chronic rhinosinusitis with nasal polyps
Undergoing endoscopic sinus surgery
Candidate for postoperative nasal irrigation
Willingness to participate and provision of written informed consent

Exclusion criteria:

Known hypersensitivity to triamcinolone or budesonide
Pregnancy or breastfeeding
Uncontrolled systemic disease interfering with study participation
Refusal to participate before randomization
Inability to perform nasal irrigation or complete follow-up

Age

From **18 years** old

Gender

Both

Phase

3

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size

Target sample size: **84**

Randomization (investigator's opinion)

Randomized

Randomization description

Eligible participants will be randomly allocated to either the intervention group (Triamcinolone plus normal saline nasal irrigation) or the control group (Budesonide plus normal saline nasal irrigation) using block randomization with a 1:1 allocation ratio. The randomization unit is the individual participant. No stratified randomization will be used. The random allocation sequence will be generated using statistical software. Allocation concealment will be ensured by using sequentially numbered, opaque, sealed envelopes, which will be opened only after the participant has been enrolled in the study

Blinding (investigator's opinion)

Double blinded

Blinding description

This study will be conducted as a double-blind randomized clinical trial. Participants and outcome assessors will be blinded to the treatment allocation. The study medications will be prepared in identical containers with coded labels to ensure that the two interventions are indistinguishable in appearance, packaging, and method of administration. The randomization code will be kept by an independent researcher who is not involved in patient recruitment,

outcome assessment, or data analysis. The allocation code will remain concealed until completion of data collection and primary statistical analysis, unless unblinding is required for patient safety.

Placebo

Not used

Assignment

Parallel

Other design features

This is a randomized, parallel-group clinical trial designed to compare the effectiveness of triamcinolone plus normal saline nasal irrigation with budesonide plus normal saline nasal irrigation in patients with chronic rhinosinusitis with nasal polyps following endoscopic sinus surgery

Health conditions studied

1

Description of health condition studied

Chronic Rhinosinusitis with Nasal Polyps (CRSwNP)

ICD-10 code

J33

ICD-10 code description

Nasal polyp

Primary outcomes

1

Description

Change in the Sino-Nasal Outcome Test-22 questionnaire score

Timepoint

Before surgery, one month after surgery, and three

months after surgery
Method of measurement
Measured using the standardized Sino-Nasal Outcome Test-22 questionnaire completed by the patient.

Secondary outcomes

1

Description

Change in nasal endoscopic findings based on the Lund-Kennedy scoring system

Timepoint

Before surgery, one month after surgery, and three months after surgery

Method of measurement

Assessed by an otorhinolaryngologist using the standard Lund-Kennedy endoscopic scoring system

Intervention groups

1

Description

Intervention group: After endoscopic sinus surgery, participants receive nasal irrigation with a solution containing triamcinolone and 0.9% normal saline. The solution is prepared by dissolving 80 mg of triamcinolone (two 40-mg ampoules) in one liter of normal saline. Patients irrigate each nostril with 10–15 mL of the solution every 6 hours for three months

Category

Treatment - Drugs

2

Description

Control group: After endoscopic sinus surgery, participants receive the standard treatment consisting of budesonide nasal spray (two sprays in each nostril every 12 hours, 64 micrograms per spray) together with nasal irrigation using 0.9% normal saline (10–15 mL per nostril every 6 hours) for three months
