Comparison of hemodynamic effects of biventricular versus left ventricular only pacing in patients receiving cardiac resynchronization therapy: a before-after clinical trial

Protocol summary

Summary

Objectives: To assess hemodynamic effects of biventricular versus left ventricular only pacing in patients receiving Cardiac Resynchronization Therapy
Design: A before-after clinical trial
Setting and conduct: All patients with CRT who refer to electrophysiological clinic of Ekbatan hospital for programming in 2012
Participants including major eligibility criteria: All patients with CRT will be included unless they have not responded to CRT.
Intervention: In intervention group, the CRT pacemaker will be set for left ventricular only pacing for three month. In control group, the CRT pacemaker will be left as biventricular pacing for three months.
Main outcome measures: The hemodynamic status of the patients will be assess at baseline and three months later as follows: (a) Velocity Time Integral (VTI) of aortic valve per cm; (b) Left Ventricular End Diastolic Volume (LVEDV) of aortic valve per ml; (c) Left Ventricular End Systolic Volume (LVESV) of aortic valve per ml; (d) Left Ventricular Ejection Fraction (LVEF) of aortic valve per percent

General information

Acronym

CRT: Cardiac Resynchronization Therapy

IRCT registration information

IRCT registration number: **IRCT201203169014N7**

Registration date: **2012-07-02, 1391/04/12**

Registration timing: **prospective**

Last update:

Update count: **0**

Registration date

2012-07-02, 1391/04/12

Scientific title

Comparison of hemodynamic effects of biventricular versus left ventricular only pacing in patients receiving cardiac resynchronization therapy: a before-after clinical trial

Public title

Comparison of hemodynamic effects of biventricular versus left ventricular only pacing in patients receiving Cardiac Resynchronization Therapy (CRT)

Purpose

Treatment

Inclusion/Exclusion criteria
All patients with CRT will be included unless they have not responded to CRT.

Age
No age limit

Gender
Both

Phase
3

Groups that have been masked
No information

Sample size
Target sample size: **46**

Randomization (investigator's opinion)
Randomized

Randomization description

Blinding (investigator's opinion)
Single blinded

Health conditions studied

1

Description of health condition studied

Cadiac Resynchronization Therapy (CRT)

ICD-10 code

I49

ICD-10 code description

Other cardiac arrhythmias

Primary outcomes

1

Description

Four variables will be considered for assessing hemodynamic status of the patients at baseline, three and six month later including: (a) Velocity Time Integral (VTI) of aortic valve per cm; (b) Left Ventricular End Diastolic Volume (LVEDV) of aortic valve per mL/m²; (c) Left Ventricular End Systolic Volume (LVESV) of aortic valve per mL/m²; (d) Left Ventricular Ejection Fraction (LVEF) of aortic valve per percent.

Timepoint

3 months

Method of measurement

Ecocardiography

Secondary outcomes

empty

Intervention groups

1

Description

In intervention group, the CRT pacemaker will be set for left ventricular only pacing for three months

Category

Treatment - Devices

2

Description

In control group, the CRT pacemaker will be left as biventricular pacing for three months

Category

Treatment - Devices
