The effect of 8 weeks versus 12 weeks steroid therapy on serum 25-hydroxy vitamin D level in children with nephrotic syndrome during remission phase: a randomized clinical trial

Protocol summary

Summary

Objectives: To compare the efficacy of 8 weeks versus 12 weeks steroid therapy on serum 25-hydroxy vitamin D level in children with nephrotic syndrome during remission phase **Design:** A randomized clinical trial. **Setting and conduct:** All eligible patients with nephrotic syndrome who will refer to clinic of pediatrics during the study period will be enrolled in to the trial. **Inclusion criteria:** (a) age of 1-18 years; (b) affected with nephrotic syndrome; (c) being in remission phase. **Exclusion criteria:** (a) children with malnutrition; (b) receiving vitamin D supplement during the last three months; (c) having liver, pancreatic, or gastrointestinal diseases; (d) using phenytoin, phenobarbital, isoniazid, or rifampin. **Intervention:** oral prednisolone 60 mg/square meter daily for 6 weeks and then oral prednisolone 40 mg/square meter every other day for 6 weeks (totally 12 weeks). **Control:** oral prednisolone 60 mg/square meter daily for 4 weeks and then oral prednisolone 40 mg/square meter every other day for 4 weeks (totally 8 weeks). **Primary outcome:** measuring the serum 25-hydroxy vitamin D level at the end of treatment through taking blood sample. **Secondary outcome:** measuring the relapse of nephrotic syndrome at the end of treatment through taking urine sample and measuring proteinuria equal to or greater than 2 plus.

Scientific title

The effect of 8 weeks versus 12 weeks steroid therapy on serum 25-hydroxy vitamin D level in children with nephrotic syndrome during remission phase: a randomized clinical trial

Public title

The effect of 8 weeks versus 12 weeks steroid therapy on serum 25-hydroxy vitamin D level in children with nephrotic syndrome during remission phase

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: (a) age of 1-18 years; (b) affected with nephrotic syndrome; (c) being in remission phase.

Exclusion criteria: (a) children with malnutrition; (b) receiving vitamin D supplement during the last three months; (c) having liver, pancreatic, or gastrointestinal diseases; (d) using phenytoin, phenobarbital, isoniazid, or rifampin.

Age

From **1 year** old to **18 years** old

Gender

Both

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **68**

Randomization (investigator's opinion)

Randomized

Randomization description

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Not used

Assignment

Parallel

Other design features

Randomization: patients will be divided into two groups according to the time of admission. One group will receive oral prednisolone for 8 weeks and another group will receive oral prednisolone for 12 weeks. Blinding: since the duration of treatment is different in intervention and control groups, blinding is impossible.

Health conditions studied

1

Description of health condition studied

Nephrotic syndrome

ICD-10 code

N04

ICD-10 code description

Nephrotic syndrome

Primary outcomes

1

Description

the serum 25-hydroxy vitamin D level

Timepoint

at the end of treatment

Method of measurement

through taking blood sample

Secondary outcomes

1

Description

measuring the relapse of nephrotic syndrome

Timepoint

at the end of treatment

Method of measurement

through taking urine sample and measuring proteinuria equal to or greater than 2 plus

Intervention groups

1

Description

oral prednisolone 60 mg/square meter daily for 6 weeks and then oral prednisolone 40 mg/square meter every other day for 6 weeks (totally 12 weeks).

Category

Treatment - Drugs

2

Description

oral prednisolone 60 mg/square meter daily for 4 weeks and then oral prednisolone 40 mg/square meter every other day for 4 weeks (totally 8 weeks).
